Accredited by NAAC with Grade 'A' (CGPA Score 3.41 on a 4 Point Scale) Best affiliated College-Goa University Silver Jubilee Year Award

LEARNING OUTCOME-BASED EDUCATION (LOBE)

for

Undergraduate Programme BSc in Geology (LOCF)

I. INTRODUCTION

Established in the year 1980, the Department has set up a standard in terms of teaching and learning. It remains one of the only two Departments in the State of Goa offering the subject of GEOLOGY at the undergraduate level.

The Department is presently manned by two Associate Professors and four Assistant Professors, aided by a full time laboratory assistant & a laboratory attendant.

The three decade old department now looks forward to involve itself in Research and Consultancy in addition to community outreach activities through our students and network of alumni and also organize seminars and discussions to highlight topics/issues of public importance.

II. OBJECTIVE/AIM OF BSc GEOLOGY PROGRAMME

The programme in Geology is designed keeping in mind the current job prospects and trends in research by offering knowledge-based papers in Mineralogy, Petrology, Stratigraphy and Structural Geology and skill-based papers in Operational Geology, Gemmology and GIS for Beginners.

The curriculum focuses on exposing the students to classroom presentations and laboratory sessions wherein they are trained to identify minerals and thereby rocks; analyse geological maps by drawing cross-sections and solve structural problems on various geological aspects.

The department endeavors to make use of the best practices in teaching by continuously upgrading its teaching methodologies and by integrating Information and Communication Technologies (ICT) Tools to aid teaching and learning. ICT Tools such as Google Classroom, Padlet, Edpuzzle, YouTube etc. are used. The department strives to make learning enjoyable and effective by adopting the collaborative classroom approach wherever possible. Collaborative classroom strategies such as Team-Pair-Solo, Round Robin, Four Corners, Three-Step-Interview etc. are used in addition to regular debates, Group projects (Field based), Poster presentations etc.

The department has experienced faculty to provide sound knowledge in the subjects of Mineralogy, Petrology, Stratigraphy and Structural Geology. Laboratory is well equipped with Petrological Microscopes, Gemstone testing equipment, field equipment, sedimentological analytical kit, as well as a rich collection of minerals, rocks, fossils and gemstones will help in correlating theoretical with practical knowledge. Field visits are conducted every even semester to areas of geological interest within and outside state of Goa to enable them to relate classroom understanding to observations in the field. Internship opportunities are provided at research institutes like National Centre for Polar and Ocean Research (NCPOR), National Institute of Oceanography (NIO), companies dealing with ground water investigation like Dip Direction Company and Terra Hydrotech.

Further, regular visits are organised to reputed research institutes wherein students are expected to interact with geoscientists and geologists to enhance their knowledge.

The department organizes an annual national level intercollegiate geological event "Nebula" for students of Geology. This event provides a common platform to interact with students of Geology from other institutes. Student Club - NEBULITES regularly conducts quizzes, debates, student seminars etc. Lecture series by geoscientists from research institutes of repute, geologists from mining companies and teaching faculties from other institutes are organised for the students to update themselves with current trends.

Students undertaking this course can pursue their Post-graduate studies in the subject to become qualified geologists /geoscientists. Through internship in marine research, ground water studies, geotechnical and mining projects a student will get exposed to the current requirements and needs of the industry.

A student intending to graduate in Geology is expected to possess a sound knowledge in associated disciplines of Chemistry, Physics and Biology. Inquisitiveness and good analytical skills are highly desirable for him/her to make detailed observations and correct interpretations. As the subject is field based, a good stamina to carry out rigorous outdoor field work, and his/her ability to apply the classroom knowledge to field observations will be the stand out factors to make him/her a successful geologist/geoscientist.

III.OVERVIEW OF THE DEPARTMENT

A. FACULTY PROFILE

HARISH S SINAI NADKARNI

e-mail: hsn001@chowgules.ac.in

Department: Geology

Designation: Associate Professor Head, Vice-Principal *Other designations*: Geologist

Date of joining: 17 August 1984

Qualifications:

- Graduate in Geology, Dhempe College, Panjim-Goa, 1982
- Post Graduate in Geology, St. Xavier's College, Mumbai, 1984.

• ALLAN RODRIGUES

e-mail: alr001@chowgules.ac.in

Department: Geology

Designation: Associate Professor

Date of joining: 20 June 1998

Qualifications:

- Graduate in Geology, Parvatibai Chowgule College, Margao-Goa, 1991
- Post-Graduation in Geology, Goa University, 1993.
- Cleared State Eligibility Test (SET), 2000

Achievements:

• Secured the highest marks in Geology at Post graduate examination conducted by Goa University, 1993.

• Dr. MEGHANA SHIVANAND DEVLI

e-mail: msd001@chowgules.ac.in

Department: Geology

Designation: Assistant Professor

Other designations: Geologist. Gemmologist

Date of joining: 26July 2003

Qualifications:

- PhD on the work titled "Sedimentology, Provenance, Tectonics and deformation studies of Lower part of the Bagalkot Group of Kaladgi Basin" in 2018
- Cleared State Eligibility Test (SET), 2005
- Diploma in Gem Testing, Gem Testing Laboratory, Jaipur Rajasthan, 2000.
- Post Graduate in Geology, Goa University, 1999.
- Graduate in Geology, Parvatibai Chowgule College, Margao-Goa, 1997

Achievements:

- Honored with Prof FB Antao gold medal for securing the highest marks in Geology at Post graduate examination conducted by Goa University, 1999.
- Qualified Gemmologist in the State of Goa

Publication:

 Devli, M and Kotha, M (2018) Paleocurrent, deformation and geochemical studies of lower part of the Bagalkot Group of Kaladgi basin at Ramthal and Salgundi: Implications on sedimentation history. Journal of Indian Association of Sedimentologists, ISSN/ISBN0970-3268. (UGC-CARE LISTED)

• SWATI SANTOSH GHADI

Email: ssg037@chowgules.ac.in

Designation: Assistant Professor

Qualifications:

- CSIR National Eligibility Test (NET) in Geology, December 2009
- Post Graduate in Geology, Goa University, 2009.
- Graduate in Geology, Parvatibai Chowgule College, Margao-Goa, 2007

She has work experience of 9 years in Iron ore mining in Goa and Karnataka. She has expertise in brown field exploration and resource estimation. She has 2 years of teaching experience.

MAGNOLIA AUREA MIRANDA e-mail mam006@chowgules.ac.in

Department: Geology

Designation: Assistant Professor

Educational Profile

- Presently pursuing part time PhD at the Goa University.
- Qualified for NET Lectureship and secured 34th rank in 2009.
- M.Sc Degree from Goa University, Taleigao Plateau with 65% in 2008.
- B. Sc Degree from Dhempe college of Arts & Science, Miramar Panaji-Goa with $73.42\%\,.$
- HSSC from PadmashriVasantraoDempo, Higher Secondary School of Arts & Science, Miramar Panaji-Goa with 58.66 %.
- SSC from Mary Immaculate Girls High School, Panaji-Goa with 75.86 %

Papers Presented and Published

- Main author of paper titled "Microstructures of Chandranath & Insuli Granites from Western Dharwar Craton, India: A comparative study of their deformational history". Presented at Hutton India Conference on the Origin of Granites in India &Present is the Key to the Past : Evidence from Indian Geological formations. The paper is published in an online proceedings of the volume.
- Main author of paper titled "Petrography and microstructures of Insuli granite, Sindhudurg district, Maharashtra". Paper presented at XIV Convention of Mineralogical Society of India and National Seminar on Recent Advances in Research on Precambrian Terrains in India.
- Co-author of paper titled "Petrography, Meso And Microstructures Of Deformed Paraconglomerate, Sanvordem Formation, Goa Group". Paper presented at XIV Convention of Mineralogical Society of India and National Seminar on Recent Advances in Research on Precambrian Terrains in India.

• Co-author of paper titled "Deformational Features Of Intraformational Para-Conglomerate Of The Paleoproterozoic Sanvordem Formation Goa Group Indicates A Brittle Ductile Dextral Shear". Paper accepted in International Journal of Geomatics and Geosciences.

MALCOLM LELIS AFONSO

e-mail: mla005@chowgules.ac.in

Department: Geology

Designation: Assistant Professor *Other designations*: Geologist

Date of joining: 06 January 2016

Qualifications:

- Graduate in Geology, Parvatibai Chowgule College, Margao-Goa,
- Post Graduate in Geology, Goa University
- CSIR National Eligibility Test (NET) in Geology, June 2016
- Diploma in Nautical Science, NAMAC (IMS Vikraant), Colaba, Mumbai, through IGNOU.

B. INFRASTRUCTURE

The teaching faculty of the department has an organized staff room. Besides a store room, the Department has well-equipped laboratories with sufficient number of Petrological microscopes, Gem testing equipment, Surveying Instruments, Geological field equipment, 3D geological models to aid class room teaching and other accessories required for the three-year degree course.

Presently the Department has separate laboratories for carrying out Practicals in Optical Microscopy and hard and soft rock studies. It possesses sophisticated instrumentation for Gemstone testing.

The Department has a well-developed Geological Museum displaying a rich collection of various kinds of rocks, minerals, fossils & gemstones.

C. ACTIVITIES

The Department of Geology has formed a students' club "NEBULITES" which regularly organizes subject related activities for students. "NEBULA" an intercollegiate event in Geology, conceptualized in 2011, has become an annual feature of the Department, bringing

together students of Geology of institutes of various states, competing in different events centered around the subject of Geology.

The Department is committed to publish a departmental newsletter highlighting the regular events. The department has organised several lectures by guest speakers for the benefit of the faculty and students.

The department organizes various events like workshops, Lecture series, Field trips for the benefit of the faculty and students. Resource persons from various institutes and from the industry are invited to present lectures and have interactive sessions with the students

D. PROGRESSION

Since the establishment of the Department in the year 1980, it has grown many fold with a marked increase in the number of students offering the subject at the Graduation level, and who have gone ahead to complete their post-graduation in the subject.

The department offers some of the unique courses like Gemstone Testing and Evaluation, Rock Deformation Microstructures in the entire state at the Graduation Level.

Most of the ex-students are today employed as 'Geologists' in the sectors of Mining and Oil industry and are very well placed. A few of them have taken up research and have joined as 'Scientists' in the reputed National Institute of Oceanography (N.I.O.). Some have joined the Geological Survey of India (GSI) as Geologists.

IV. GRADUATE ATTRIBUTES

Some of the characteristic attributes of a graduate in Geology are

• Education and Training

a) Provide training of the highest academic quality in Geosciences in a challenging and supportive learning environment.

b) Develop a systematic understanding of both core areas and advanced topics in thestudy of the Earth, its materials and structure, its history over 4600 million years, andthe processes that have controlled its evolution as a planet by viewing Earth from newand challenging perspectives of time, space, process and pattern.Provide for student interaction with high-level scientific expertise and advancedequipment in an environment committed to scientific advance.

c) Develop skills in gathering and interpreting the geological data used to gain this understanding and thereby equip students with the foundations for theirprofessional careers or additional study.

d) Provide an excellent preparation for a career in professional practice in industrial orenvironmental Earth Sciences, research in Geosciences, and specialist areas of otherphysical and natural sciences

• Communication Skills

Use group discussions and joint seminar presentations to research and present work collaboratively; and Develop oral presentation and participation skills during seminars and group-work, and in written form through online e- learning tools, dissertations and

essays.

• Critical Thinking:

Acquire an understanding of the concept in geology and related disciplines and an ability to understand, integrate, and extend it so that all fundamental geological concepts are accessible.

• Research-Related Skills:

Develop a research design, which has an appropriate problem related to earth sciences but may incorporate some scientific methods, ability to plan and write a research paper.

• Self and Time Management:

Time management skills are developed through interaction with the assessment process in all years: students must learn how to meet deadlines for submission of continuous assessment material and how to set aside appropriate time to prepare for end of year examinations.

• Team Work:

Ability to contribute effectively to team objectives and interact productively withothers both in project-related settings

This is addressed through group exercises in all years of the Geology programme, including in-class presentations and group lab-sessions.

• Digital Literacy:

a) ability of advanced Word skills and GIS, databases, spreadsheets, digital drawing through workshops

• Moral and Ethical Values:

Avoid unethical behaviour such as fabrication, falsification or misrepresentation of data or committing plagiarism, not adhering to intellectual property rights, and adopting objectives, unbiased and truthful actions in all aspects of work

Counseling is done by advising students to select along with core courses, a group of elective courses depending upon which profession they would prefer in Geology after their graduation. The groups proposed were

Profession	Research/ Academic	Geotechnical	Petroleum	Structural	Mining	Environmental	UPSC- Geologists/ Hydro geologist	Water Resource
Semester I	√						√

V. QUALIFICATION DESCRIPTORS

The qualification descriptors for the B.Sc. programme in Geology is aligned with understanding and applying the basic concepts learned. The student should be able to :- demonstrate the ability to identify and differentiate minerals, rock, fossils and Earth structures in the field, as hand specimens and using laboratory techniques including microscopic analysis.

Develop skill to observe and record original field and laboratory data and then apply these to evaluate and resolve geological and geotechnical problems.

Carry out independent field-based project .Focusing on classroom teaching supplemented with field studies, besides promoting internship Programmes in institutes and companies of repute, the students are exposed to skill-based learning which will enable them to get equipped for the present day requirements of the industries.

VI. PROGRAMME LEARNING OUTCOMES (PLO's)

Programme	Short Title of	Description of the Programme Outcomes			
Outcomes	the POs				
(PO)		Graduates will be able to :			
PO-1	Use of Taskasala and Dask	Apply appropriate IT tools efficiently in their daily life-			
	Technology,Prob	professional and personal.			
	lem Analysis and Solutions	Think critically, identify, analyze problems/ situations and further attempt to design/ develop solutions that meet the			
		specified goals.			
PO-2	Environment	Be aware of environmental issues and commit towards			
	and	sustainable development at local/ national and global			
	Sustainability	context.			
	and Ethics	Recognize and understand professional ethics /human values and be responsible.			
PO-3	Individual and	Function effectively at various levels, capacities and			
10-5	Team work,	situations.			
	Communication	Communicate proficiently (oral and written) as a responsible			
	and Life Skills	member of society.			
		Recognize the need for, and have the preparation and ability			
		to engage in independent and life-long learning in the			
		broadest context of domain specific change.			
PO-4	Research	Understand general research methods and be able to			
	Aptitude and	analyse, interpret and derive rational conclusions.			
	Social Decrease in ilitate				
	Responsibility				
PROGRAMM	IE LEARNING OUT	COMES (PLO)			
		Bachelor's degree in Geology, the students will be able to :			
PLO-1	Explain the theore	etical concepts involved in courses like Mineralogy, Petrology			
	and Structural Geology.				
PLO-2	Apply theoretical concepts involved in mineral forming to confidently identify				
	them in hand as well as in thin sections.				
PLO-3	Analyse the theoretical concepts and apply them in interpreting the various				
	petrographic features in rocks exhibited in hand specimens and in thin sections.				
PLO-4	Create, analyse and interpret structural geological maps.				
PLO-5		d observations during field excursions and relate their			
	_	various structural and petrological features learnt in classroom			
	for correct interpr				
PLO-6		fidently and write geological reports.			
PLO-7	Demonstrate cont	ent knowledge appropriate to professional career goals			

VII. COURSE STRUCTURE

(I) **Core and Elective Courses**:

Core Course: The Core Course is to be compulsorily studied by a student as a core requirement to complete the Programme in a said discipline of study.

Elective Courses: Elective course is a course which can be chosen from a pool of papers.

Semester	Single Major		Major-Min	Major-Minor (Major)		Major-Minor (Minor)	
I	2 CC	08 Credits	2 CC	08 Credits	1 CC	04 Credits	
II	2 CC	08	2 CC	08	1 CC	04	
III	1 CC 3 EC	04 12	1 CC 1 EC	04 04	1 CC	04

VIII. COURSE DESCRIPTION

With a growing demand updating to the newer demands of the industry and academics, the department has incorporated newer courses under Autonomy in its academic curriculum like Operational Geology and Gemmology, Remote Sensing, Exploration Geophysics and Mining, Natural Hazards etc,

1. FUNDAMENTALS OF MINERALOGY

As minerals are building blocks of earth's material, the course is designed to understand the basic concepts in mineralogy, their chemistry and identification of minerals in hand specimens. Further, the students will study crystallography in understanding the morphology, symmetry and the normal crystal classes

2. EARTH'S DYNAMICS AND TECTONICS

This is a core branch of earth science which deals with basic concepts of natural internal forces shaping the earth. Earth's Dynamics and Tectonics aims at acquainting the student with these forces as well as the geological structures resulting from the action of these forces on rocks. The course also aims at providing an understanding of the processes in action on the earth's surface and their impact on man and his institutions.

3.ELEMENTARY PETROLOGY

Petrology is the science of rocks. The course will help the students to exhibit an improved understanding of fundamental petrologic processes and common rock types. In practicals, students learn to identify, describe and classify rocks using hand specimens.

4. PRINCIPLES OF STRATIGRAPHY AND PALEONTOLOGY

Stratigraphy and Paleontology, the two branches of Geology work together to unearth the secrets of age from rocks of the earth's crust. Stratigraphers study the composition and arrangement of layered or stratified rocks. Paleontologists study the remains of plants and animals which have been preserved in the earth's crust by natural processes. With these objectives in mind it becomes pertinent to understand the basic concepts of Stratigraphy and Palaeontology.

5. ADVANCED MINERALOGY AND GEOCHEMISTRY

The course provides geoscientific study of mineralogy in understanding the structure, chemistry, optical & physical properties, stability relations and genesis of minerals. With respect to geochemistry the student will understand the distribution of various elements and their abundances in the earth's crust.

6. PHYSICAL GEOLOGY

The natural agencies like wind, rivers, glaciers have been moulding and remoulding the surface of the earth over millions of years. This course aims at the understanding of the processes and the physical forces responsible in developing the surficial features and highlighting the role of these natural

agencies in grading and degrading the land surface.

7. GROUNDWATER AND HYDROGEOLOGY

The objective of this course is to impart knowledge about groundwater, its movement, methods of its exploration, the criteria of its quality, methods of its conservation, recharge of groundwater, monitoring of groundwater quality and quantity.

8. ORE GENESIS

The course aims at understanding the various types of mineral deposits, classification, their mode of occurrence, geologic & geographical distribution and genesis. It primarily focuses on the processes of formation of ore deposits. Furthermore, it also aims at identification of economic minerals in hand specimens.

9. MARINE GEOLOGY

The objective of this course is to provide knowledge on essential concepts of oceanography and

To study the tectonics, geology, economic resources with respect to the oceans.

10. STRUCTURAL GEOLOGY

The course is designed for the students to understand the geometry and mechanics of the various geological structures that result through the deformative processes operative within the earth.

11. ENGINEERING GEOLOGY

To impart sufficient knowledge of engineering geology so as to be able to anticipate the technical problems related to geology of various engineering sites and suggest possible remedial measures.

12. OPTICAL MINERALOGY

The objective of the course is to provide the basics of geoscientific studies in Optical Mineralogy involving optical properties of minerals in plane polarized light, in between crossed polars and convergent light. Further, it will strengthen their knowledge in understanding of optical indicatrices and determination of optic sign of minerals. The knowledge of optics is applied in understanding and identification of minerals.

13. NATURAL HAZARDS AND MANAGEMENT

The course is designed with an aim to give the student an understanding about: various natural hazards; stages in management aimed at avoiding and /or reducing loss to life and property; and Agencies involved in mitigation and management of damage due to hazards.

14. GEOTECTONICS

Ever since the creation of the earth, there have been marked changes in the distribution of land and sea. The dynamics of these changes are stupendous. The subject of Geotectonics aims at understanding the mechanism of such changes and explaining the structure of the earth and the

processes responsible for the movement and redistribution of continents and seas.

15. SEDIMENTARY PETROLOGY

To provide an understanding of the origin of sedimentary rocks, the relationship of sedimentary processes to plate tectonics, and the use of sedimentary rocks in the study of the geological past.

16. PRECAMBRIAN STRATIGRAPHY OF INDIA

The Peninsular India is a shield comprising of composite crustal blocks of Archean antiquity and therefore it preserves record of the various tectonic events that this land has witnessed. This course aims at providing a basic understanding of the various stratigraphic units and the correlation of International Geological Time Scale with Indian Stratigraphic Time Scale. It aims to provide understanding of the Precambrian geology, stratigraphy, fossil content and the economic resources of the lithounits from the Peninsular India.

17. PETROLEUM GEOLOGY

The course aims to provide the students an understanding of essential and basic concepts of Petroleum Geology, the process and the operations involved in Petroleum exploration & extraction and to provide knowledge on the petroliferous basins of India

18. METAMORPHIC PETROLOGY

The course aims To provide essential concepts of metamorphism and metamorphic rocks. To study metamorphic rocks with respect to fabrics and types. To understand the concept of facies. Also to understand how metamorphism is related to plate tectonics

19. REMOTE SENSING AND DIGITAL IMAGE PROCESSING

This course is designed as an introduction to the use of remote imaging in geologic applications. The basic concepts of image production, processing and interpretations are covered.

20. IGNEOUS PETROLOGY

The course will help the students to understand petrologic processes and common rock types. In practical's, students learn to identify, describe and classify rocks using hand specimens and rock thin sections.

21. PHANEROZOIC STRATIGRAPHY OF INDIA

The course will help understanding the Indian stratigraphic units and to correlate International Geological Time Scale with Indian Stratigraphic Time Scale. Also to understand the geology, stratigraphy, fossil content, economic resources of the lithounits from the Phanerozoic Eon from the Indian context.

22. ROCK STRUCTURES AND DEFORMATION MICROSTRUCTURES

The course will help to study deformational history of rocks. This study includes the understanding of the deformation and metamorphic processes the rock has undergone with the aim to reconstruct its structural and metamorphic history.

23. SURVEYING, MAPPING AND FIELD GEOLOGY

To Provide basic knowledge of surveying techniques

To upgrade and relate the theoretical knowledge of Geological aspects to field observations.

This course also introduces the basic principles and techniques of Geographic information Systems (GIS)

24. PRINCIPLES OF GEOPHYSICAL EXPLORATION AND MINING

Mining being a key source of revenue generation for the Central as well as State governments, and an important job provider for Geologists, this course is designed to equip the undergraduate student with basic knowledge of key concepts of mining processes right from exploration to exploitation, together with an acquaintance of government regulations that control the mining and mineral conservation processes. In Geophysical exploration the student will gain first-hand knowledge dealing with the principles and their significance.

IX. COURSE LEARNING OUTCOMES (CLO's)

COURSE CODE	COURSE TITLE		COURSE OUTCOMES
GEL-I.C.1	Fundamentals	CLO1	Explain what is a mineral and its formation.
	of Mineralogy	CLO2	Explain mineralogical properties like
			polymorphism, isomorphism, pseudomorphism.
		CLO3	Describe the physical properties of minerals.
		CLO4	Relate crystal chemistry and chemical bonding
			to the formation of minerals like crystal
			structure, chemistry, chemical composition.
		CLO5	Compare and contrast the elemental and major
			oxide composition of the crust with the entire
			earth.
		CLO6	Link how the internal atomic structure of
			minerals affects the external development of a
			crystal in terms of crystal symmetry, crystal
		01.07	system and crystal forms.
		CLO7	Identify rock-forming minerals in hand specimen
		CI 00	using their physical properties.
		CL08	Classify minerals into crystal systems based on crystal symmetry.
GEL-II.C-2A	Earth's	CLO1	Explain the origin and nature of the earth and
	Dynamics and		its layered structure.
	Tectonics	CLO2	Gain insights into the spheres of the earth and
			their inter-relationship, the earth's Gravity, and
			magnetic field.

Upon completion of the course, the student will be able to :

CL03Relate the concept of Isostacy with plate tectorCL04CL04Differentiate between the different types forces acting in the lithosphere and link to differenttypes of responses of brittle and ducti substances to stress.CL05Explain the exogenous and endogenous geological hazards.CL06Read and interpret geological maps and dr geological cross – sections.GEL-I.C-3AElementary PetrologyCL01CL03Explain the processes involved in the formatio of rocks, their textures and structures.CL03CL04Classify rocks into their various types – Igneou Sedimentary or Metamorphic.CL04Differentiate between the different rock ty based on their textures, structuresCL05mineralogy. Identify the different textures and structures or rocks.CL04Differentiate between the different rock ty based on their textures and structures or rocks.CL04Differentiate between the different rock ty based on their textures and structures or rocks.CL04Differentiate between the different rock ty based on their textures and structures or rocks.CL05mineralogy. Identify the different textures and structures or rocks.CL06rocks. pescribe the mineralogy and properties of, and
GEL-1.C-3AElementary PetrologyCL01Explain the processes involved in the formation of rocks, their textures and structures. CL03GEL-1.C-3AElementary PetrologyCL01Explain the processes involved in the formation of rocks, their textures and structures. CL03CL03CL04Differentiate between the different rock ty based on their textures, structures mineralogy. Identify the different textures and structures of rocks. CL05
GEL-I.C-3AElementary PetrologyCL01Explain the exogenous and endogenous geological hazards. Read and interpret geological maps and dr geological cross – sections. Recognize different types of folds, faults a joints.GEL-I.C-3AElementary PetrologyCL01Explain the processes involved in the formatio of rocks, their textures and structures. Cl02CL03CL04Explain the importance of rocks. CL04CL03CL04Differentiate between the different rock ty based on their textures, structures CL05CL05Mineralogy. Identify the different textures and structures of rocks. Describe the mineralogy and properties of, and
GEL-I.C-3AElementary PetrologyCL01Explain the exogenous and endogenous geological hazards. Read and interpret geological maps and dr geological cross – sections.GEL-I.C-3AElementary PetrologyCL01Explain the processes involved in the formatio of rocks, their textures and structures. CL02CL03CL03Explain the importance of rocks. CL04Differentiate between the different rock ty based on their textures, structures CL05CL05Mineralogy. Describe the mineralogy and properties of, and
identify common rock types.
GEL-II.C-4 Principles of CLO1 Explain principles of Stratigraphy and concept
Stratigraphy Facies.
and CLO2 Differentiate between absolute and relative ag
Paleontology of the earth.
CLO3 Explain measurements of geologic time.
CLO4 Describe how rocks are correlated.
CLO5 Describe types of fossils, conditions and mod
for fossilisation, how fossils can be used to loca
economic deposits.
CLO6 Describe and explain morphology of t
hardparts of different phylum's and geologi
time range.
CLO7 Explain map reading and handle clinome
compass.
CLO8 Solve problems on bearings.
CLO9 Describe and identify fossils/casts/shells w
their morphology and geological age.
CLO10 Apply classroom teaching to field observation
and preparing a geological report.
GEL-III.C-5A Advanced CLO1 Explain the concept of Gibbs Phase Rule.
Mineralogy and CLO2 Correlate structure, chemical composition w
Geochemistry physical and optical properties of minerals
major silicate group of minerals.
CLO3 Interpret stability relations of minerals us
Phase diagrams.
CLO4 Explain how minerals originate and associa
with each other in a rock
CLO5 Explain the geochemical composition of t
Earth.
CLO6 Describe how compatible elements are involv

		CLO7	in the various geochemical processes. Explain how incompatible elements are involved in the various geochemical processes.
		CLO8	Evaluate and interpret how geochemistry can be used to interpret tectonic setting.
		CLO9	Solve applied quantitative problems.
		CL010	Plot major oxides in tectonic discriminant diagrams.
GEL-III.E-1	Physical Geology	CLO1	Identify the dominant medium of erosion transportation and deposition in a given area and explain the mechanisms for those processes. Identify various dessert landforms and explain
		CLO2	the processes involved in their formation. Identify various fluvial landforms and explain
		CLO3	the processes involved in their formation. Identify various Karst topography and features
		CLO4	and explain the processes involved in their formation. Identify various glacial and coastal landforms
		CLO5	and explain the processes involved in their formation.
		CLO6	Assign stream order as per Strahler's Method, Analyze various attributes of basin morphometry and drainage. Prepare and analyze long and cross sections of
		CLO7	river profiles from SOI Toposheet. Deduct the processes involved in shaping the
		CLO8	geomorphology of a local area by an integrated approach of applying theoretical knowledge and field based observations.
GEL-III.E-2	Groundwater	CLO1	Explain the concept of Groundwater, its sub surface distribution and sources.
	Hydrogeology	CLO2	Explain the rock properties of porosity and permeability affecting the movement of groundwater.
		CLO3	Differentiate between the various types of aquifers.
		CLO4	Carry out groundwater exploration by resistivity method.
		CLO5	Draw flow-nets from groundwater levels.
		CLO6	Determine water quality based on various parameters.
		CLO7	Explain the effects of over withdrawal of groundwater and waterlogging, and suggest mitigation measures.
GEL-III.E-3A	Ore Genesis	CLO1	Differentiate between rock-forming minerals and
		CLO2	ore minerals.
		CLO3	Explain the basis of classifying ore minerals.
		CLO4	Explain the origin and stages of ore formation. Classify the various ore minerals under categories such as magmatic, hydrothermal,
		CLO5	volcanogenic etc.

		r	
			Explain the processes involved in the formation
		CLO6	of ore deposits.
			Explain the genesis and occurrence of various
		CLO7	ore deposits in India.
			Evaluate ore minerals in hand specimen using
			their physical properties.
GEL-III.E-4	Marine Geology	CLO1	Explain ocean bathymetry and learn to identify
			features of the ocean floor such as mid ocean
			ridges, seamounts, guyots, hydrothermal vents,
			pillow basalts, trenches.
		CLO2	Relate the ocean features to its tectonic origin.
		CLO3	Explain the various processes which generate
		0200	ocean currents.
		CLO4	Classify marine sediments into four broad
		0101	categories based on their origin i.elithogenous,
			hydrogeneous, biogenous, cosmogenous.
		CLO5	Identify the characteristics of important marine
		0105	resources for the future such as polymetallic
			nodules and gas hydrates.
		CLO6	Recognise how near shore geological processes
		CLOO	shape coastlines over time.
GEL-III.SEC-1	Skill	CLO1	Manage any data in a more systematic manner in
GEL-III.SEC-1	Enhancement	CLUI	excel spreadsheets.
	Course (SEC)	CLO2	Perform basic data analysis on a given set of data
	course (she)	GHOL	using Excel tools
	Operational	CLO3	Explain the phases and processes involved in a
	Geology and	0100	drilling project.
	Gemmology	CLO4	Explain the various types of data that is
	deminology	0101	generated in a drilling project
		CLO5	Create a drill hole database in Excel.
		CLO5 CLO6	Decide the factors deciding cost of a gemstone.
		CLO0	Explain the causes of colours in gemstones
		CL07 CL08	Explain how gemstones are synthesized.
		CLO0 CLO9	Explain how gemstones are synthesized.
			grade to saleable quality.
		CL010	Explain the styles of cuts preferred for different
		CLUIU	gemstones
GEL-IV.C-6	Structural	CLO1	Gather knowledge about the geometry of various
	Geology	CLUI	structures acquired by rocks at primary and
	Geology		secondary stages.
		CLO2	Explain the concepts of stress and strain.
		CLO2 CLO3	Explain the application of stress and strain in
		6103	rock deformation.
		CLO4	Identify rock structures and deformities
		CLUT	likejoints, folds and faults.
		CLO5	Explain a structural separation in geological
		6003	context based on unconformities.
		CLO6	Identify secondary structures developing in
		CLOO	rocks.
		CLO7	Interpret geological maps
		CL07 CL08	Solve structural problems based on provided
		6000	data.
		l	uala.

GEL-IV.E-5A	Engineering	CL01	Explain issues related to geological basement
GEL-IV.E-JA	Geology	CLUI	and structure of a region.
	deology	CLO2	Identify the characteristics of basement rock
			formations and problems associated with them.
		CLO3	Describe and interpret geological structures in
			geological maps and drawing cross sections.
		CLO4	Assess the area appropriately suggested for a
			geotechnical project and apply the geological
			knowledge for a safe and secure construction
		CLOF	and operation of a geotechnical project.
		CLO5	Suggest remedial measures to encounter the problems detected.
		CLO6	Interpret core logs and suggest suitable remedial
			measures.
		CLO7	Collect data interpret and analyse it to solve
			problems associated with the engineering
			project as well as the environment.
		CLO8	Explore and suggest novel ideas using geological
		01.00	background for the geotechnical project.
		CLO9 CLO10	Suggest Site feasibility based on geological maps.
		CLUIU	Carry out physical and mineralogical descriptions of cores.
		CL011	Draw relationship of core log to RQD values
		CL012	Compute reservoir area, catchment area,
			reservoir capacity.
		CL013	Solve numerical problems on ultimate strength
			of rocks.
GEL-IV.E-6A	Optical	CLO1	Explain basic concepts in optical mineralogy
	Mineralogy		w.r.t.relief, pleochroism, character between
			crossed polars, extinction and their types, interference colours, zoning and twinning.
		CLO2	Correlate elementary principles of optics to
			crystal optics.
		CLO3	Distinguish Uniaxial and Biaxial Indicatrix
		CLO4	Explain the concept of formation of Interference
			colours and determine their orders as per
		CLOF	Newton's Scale.
		CLO5 CLO6	Handle Petrological Microscopes. Identify major rock-forming minerals in
			microsections.
		CLO7	Detect Optic Sign for Uniaxial and Biaxial
			Minerals using Interference Figures.
		CLO8	Determine Anorthite content of Plagioclase.
		CLO9	Calculate Optic Axial Angle.
GEL-IV.E-7	Natural	CLO1	Explain the causes, effects and mitigation
	Hazards and		measures for natural hazards such as droughts,
	Management		floods, cyclones, volcanic eruptions, tsunami, landslides & subsidence, salinity hazards, coastal
			erosion.
		CLO2	Appreciate the CRZ act and its impact on disaster
			mitigation.
		CLO3	Explain the framework and roles of various
			bodies under the National disaster management

			nlan of India
			plan of India.
		CLO4	Prepare a simple disaster management plan for a
			building/unit.
GEL-IV.E-8 Ge	eotectonics	CLO1	Gain an insight into the study of the earth's
			interior using seismic data.
		CLO2	Explain the various layers of the earth's interior
			and the mechanism of plate tectonics.
		CLO3	Explain the origin and nature of the earth's
			magnetic field and palaeomagnetism.
		CLO4	Explain the theory of Continental Drift along
			with supporting evidences.
		CLO5	Explain mountain building (orogenesis) and its
			relation with plate tectonics.
		CLO6	Identify and plot various tectonic features on the
		0100	earth's surface.
GEL-IV.SEC-2 Sk	cill	CLO1	Become proficient in the use of leading open
	hancement		source GIS platforms QGIS.
	ourse	CLO2	Use open source GIS platforms Google Earth Pro.
	EC)	CLO3	Use mobile GPS to collect field data and convert
	10)	0100	it into Suitable GIS data formats.
GI	S for	CLO4	Extract geospatial data from both hardcopy
	eginners	CLOT	maps and open source GIS portals.
De	-gilliers	CLO5	Visually identify various features such as
		CLOD	
			landforms, geologic structures, man made
		CLOC	structures etc on satellite imagery.
		CLO6	Apply GIS techniques such as those used for
		CL 07	analyzing and presenting water quality data.
		CLO7	Apply GIS techniques such as those used for
			analyzing and presenting terrain data.
		CLO8	Produce aesthetically pleasing and informative
		a t a a	maps.
		CLO9	Create Webmaps using Google My Maps.
		CL010	Prepare and execute a simple GIS project in their
		a. a :	domain of study.
	dimentary	CL01	Explain the processes leading to the formation
Pe	etrology	ax	of sedimentary rocks
		CLO2	Identify and explain the various textures and
		ax	structures of sedimentary rocks.
		CLO3	Relate different sedimentary facies with the
			environment of deposition.
		CLO4	Describe and identify the textures, structures
			and mineral composition and origin of various
ļ			clastic and non-clastic sedimentary rocks.
GEL-V.E-9B Pr	recambrian	CLO1	Explain evolution and stabilisation of the
Str	ratigraphy of		Archean cratons in India with special emphasis
Inc	dia		on Dharwar craton.
		CLO2	Explain the tectonics behind Mobile Belts of
			India.
		CLO3	Differentiate between western Dharwar Craton
i I			and Eastern Dharwar Craton.

GEL-V.E-9B	Precambrian	CLO4	Interpret geological and geochemical differences
(contd.)	Stratigraphy of	CLOT	of the basement rocks for Sargur (Gorur Gneiss)
(contrail)	India		and Dharwarian (Peninsular Gneissic Complex)
	(contd.)	CLO5	Relate the lithostratigraphy of Sargur and
			Dharwar Schist Belt and correlate it with the Goa
			Group of rocks.
		CLO6	Explain the Purana basins in India with
			emphasis on Cuddapah Vindhyans and Kaladgis.
		CLO7	Identify specimens representing rock
		01.00	Formations in Goa
		CL08	Assigning stratigraphy Formations based on fossils.
		CLO9	Solve problems in stratigraphic correlation.
GEL-V.E-10	Petroleum	CL09 CL01	Describe the Physical & chemical properties of
GEL-V.E-10	Geology	CLUI	Hydrocarbons.
	deology	CLO2	Compare various exploration techniques
		0101	involved in hydrocarbon detection.
		CLO3	Explain the process of drilling & completion of a
			Petroleum well.
		CLO4	Prepare isopach maps.
		CLO5	Delineate and describe the petroliferous
		a. o. c	domains in India.
		CLO6	Analyse well logs.
GEL-V. E-11A	Metamorphic	CLO1	Explain metamorphism and their upper and
	Petrology		lower limits and study metamorphic concepts like factors, types of metamorphism and facies.
		CLO2	Apply fundamental principles of metamorphism
			to development of textures.
		CLO3	Classify metamorphic rocks based on mineral
			assemblage and fabric.
		CLO4	Relate the types of metamorphism with the
			product.
		CLO5	Represent metamorphic rocks graphically using
		CL O C	Phase Diagrams.
		CLO6	Correlate deformation with grade of
		CLO7	metamorphism. Evaluate how the different factors like
			temperature, pressure, protolith, chemically
			active fluids and time control metamorphism.
		CL08	Interpret tectonic setting of Metamorphic Belts
			based on field characters and kinematic stress
		CLO9	indicators.
			Interpret the metamorphic processes combining
			the evidences derived from hand specimens,
		01.010	microsections and protolith.
		CL010	Differentiate between Barrovian and Buchan Zones
		CL011	Apply the facies concept to progressive contact
			and regional including burial metamorphism.
		CL012	Identify textures of metamorphic rocks in hand
			specimens.
		CL013	Identify textures, structures, mineralogy of
			metamorphic rocks in thin sections

X. TEACHING-LEARNING-EVALUATION PEDAGOGIES

In keeping with the mission of the college, the Department of Geology is continuously adopting teaching methodologies that are in sync with the latest in the teaching – learning process so that the students may derive the maximum benefit from them while enjoying the learning process.

Objectives of the Practice

- 1. To bring in innovations in teaching-learning
- 2. Initiate writing skills amongst students through writers club and get connected with alumni.
- 3. To bring ex-students under a single roof so that their expertise can be utilised by the department.
- 4. To get e-books in all the courses to students irrespective of the teacher teaching the course
- 5. To give students a varied choice of courses to purse their interests.

Following are the various teaching methodologies adopted by the faculty of the Geology Department:

1. TRADITIONAL TEACHING METHOD

This remains the domain method of teaching.

2. GEOLOGICAL FIELD BASED TEACHING

Geology been a field based subject, students are exposed to field traing at various places of geological interest within and outside the state of Goa. The training includes field mapping and exposure to the different aspects of Structural geology, Petrology, Mineralogy, Stratigraphy

Students are taken to the field where they are exposed to actual different rock types, rock structures, etc.

They are also taken to visit reputed Research Institutes (NIO,NCPOR, etc) where they interact with Scientists and get a glimpse of sophisticated research instruments.

3. ICT BASED TEACHING-LEARNING

There has been a spurt in computer-based teaching methodologies with the advancement in computer software as well as hardware. Some of the tools and methods adopted are listed below:

ICT TOOLS:

- 1. PowerPoint Presentations (By teachers as well as students)
- 2. Google Classroom
- 3. Google Earth
- 4. Padlet
- 5. YouTube Videos
- 6. (Geologic Documentaries e.g.'How the earth was made' series)

ICT RESOURCES:

 \circ NOAA

Educational Resources (Ocean exploration videos, multimedia education mission lessons and exercises)

https://oceanexplorer.noaa.gov/edu/learning/welcome.html https://www.noaa.gov/education/resource-collections

o USGS

(e-books and Google earth Kml files for plate tectonics and earthquakes)
<u>https://www.usgs.gov/</u>
Smithsonian Institution Google earth Kml files showing location and type of volcanic activity)
https://volcano.si.edu/

4. FLIPPED CLASSROOM

XI. ACTIVITIES OF THE DEPARTMENT

Activities related to the subject like workshops, student seminars, presentations, Documentary making, geological fieldwork, visits to institutes and industries are organized for the students which are in accordance to the courses offered in Geology.

XII. COURSE SYLLABUS

SEMESTER I

Course Title: **FUNDAMENTALS OF MINERALOGY** Course Code: **GEL-I. C-1** Credits: **3 (45 Contact hours)** Marks: **75**

Course Objectives

As minerals are building blocks of earth's material the course is designed to understand the basic concepts in mineralogy, their chemistry and identification of minerals in hand specimens. Further, the students will study crystallography in understanding the morphology, symmetry and the normal crystal classes.

Course Outcomes

Upon completion of the course, the student will be able to,

CO1 Understand what is a mineral and its formation.

CO2 Explain mineralogical properties like polymorphism, isomorphism, Pseudomorphism.

CO3 Describe the physical properties of minerals.

CO4 Relate crystal chemistry and chemical bonding to the formation of minerals like crystal structure, chemistry, chemical composition.

CO5 Compare and contrast the elemental and major oxide composition of the crust with the entire earth.

CO6 Link how the internal atomic structure of minerals affects the external development of a crystal in terms of crystal symmetry, crystal system and crystal forms.

CO7 Identify rock- forming minerals in hand specimen using their physical properties.

CO8 Classify minerals into crystal systems based on crystal symmetry.

Module I

Minerals: Rock-forming minerals and ore minerals.

Common physical properties of minerals including electrical and magnetic properties. Isomorphism, Polymorphism, Pseudomorphism

silicate structures: (sorosilicate/ cyclosilicates/ nesosilicates/ inosilicate/ phyllosilicates/ tectosilicate)

Introduction to rock-forming mineral Olivine, Pyroxene, Amphibole, Mica, Feldspar, Quartz and its varieties

Important and abundant mineral groups: aluminosilicates, sulfides, sulfates, carbonates; oxides; halides; native metals (with three examples each)

Module II

Elemental and major oxide composition of the earth's crust -Types of Atomic bonds (Ionic/Covalent/Metallic/ Van der Waal). Radius Ratio, Ionic Radius, Co-ordination Number.Types of co-ordination. Atomic arrangement (HCP/CCP)

Module III

(15 hours)

(15 hours)

Space lattice.Unit cell.External morphology of a crystal. Crystal Forms with examples. Crystallographic axes and Crystal systems. Symmetry in crystals. (Axis, Plane, Center) Interfacial angles and Contact Goniometer. Parameters and Indices

Practical: 1 credit Maximum Marks: 25

- 1. Identifying and determining the crystal symmetry, class, system and forms in the normal class of the six systems.
- 2. Identification and study of minerals w.r.t their physical properties, occurrence, chemical composition and use.

List of books recommended for reference Mandatory Reading

(15 hours)

- Perkins, D., (2015), Mineralogy, Pearson Education Limited.
- Dana, J.D & Ford, W. E., (2010). Dana's Manual of Mineralogy. J. Wiley & Sons.
- Klein, C. and Dutrow, B., (2007). The Manual of Mineral Science, John Wiley & Sons, Inc.
- Read, H. H., (1988). Rutley's elements of Mineralogy, CBS Publications.
- Battey, M H. (1971), Mineralogy for students, Oliver & Boyd

Supplementary Reading

Course Title: EARTH'S DYNAMICS AND TECTONICS Course Code: GEL-II. C-2A Credits: 3 (45 contact hours) Marks: 75

Course Objectives

This is a core branch of earth science which deals with basic concepts of natural internal forces shaping the earth. Earth's Dynamics and Tectonics aims at acquainting the student with these forces as well as the geological structures resulting from the action of these forces on rocks. The course also aims at providing an understanding of the processes in action on the earth's surface and their impact on man and his institutions.

Course Outcomes

Upon completion of the course, the student will be able to:

CO1 Understand the origin and nature of the earth and its layered structure.

CO2 Gain insights into the spheres of the earth and their inter-relationship, the earth's Gravity, and magnetic field.

CO3 Relate the concept of Isostacy with plate tectonics.

CO4 Differentiate between the different types of forces acting in the lithosphere and link the different types of responses of brittle and ductile substances to stress.

- **CO5** Understand the exogenous and endogenous geological hazards.
- **CO6** Read and interpret geological maps and draw geological cross sections.
- **C07** Recognize different types of folds, faults and joints.

Module I

(15 hours)

Origin of Solar System (Nebular Concept) and formation of a layered Earth. Size and shape of the Earth. Internal structure of the Earth: Geosphere asthenosphere, lithosphere, hydrosphere, biosphere, atmosphere (anoxic to oxic conditions) wrt to earth dynamic Earth's Gravity : Acceleration due to gravity, change with latitude and altitude. Earth's Magnetism: Earth as a magnet; lines of force, Source of Earth's Magnetic field, Declination and inclination, Geomagnetic axis and Geographic axis.

Module II

Introduction to Plate Tectonics:

Concept of isostacy

Lithostatic or confining pressure, Differential forces: tension, compression, couple. Concept of stress and strain: stages of deformation: Elastic, Plastic and Rupture. Brittle and ductile substances.

Introduction to geological hazards: exogenous (floods, drought and cyclones) and endogenous (volcanic hazards, earthquakes and tsunamis, mass wasting)

Module III

(15 hours)

(15 hours)

Map and Scales

Stratification, Strike and dip (true and apparent dip) strike and dip symbols.

- Outcrop patterns of Horizontal, Inclined & vertical strata on various types of grounds (horizontal ground, valley and spur).
- Folds: Terminology, causes, types of folds; symmetrical, asymmetrical, overturned, recumbent, isoclinal, fan, chevron, monocline, structural terrace, plunging and non-plunging; significance. Outcrop pattern of folds on horizontal ground, valley and spur.

Faults: Definition & terminology, geometric classification, significance; horst and graben.

Joints: Geometric classification, map symbols, columnar joints and sheet structure, significance.

Unconformities: Stages of development, types, significance; outliers and inliers; overlap and offlap.

Practical: 1 credit Maximum Marks: 25

- 1. Drawing cross-section and description of structural maps involving single series (Horizontal and Inclined)
- 2. Graphical solution to structural problems.

List of books recommended for reference

Mandatory reading

- Travis, H., 2012. Living with Earth, Phi Learning Pvt. Ltd., New Delhi.
- Press, Siever, Grotzinger and Jordan., 2003. Understanding the Earth (4th edition).

- Monroe and Wicander., 2001. The Changing Earth: Exploring Geology and Evolution (3rd edition).

- Jain, A K ., Structural geology, , Geological Society of India.
- Holmes' Principles of Physical Geology edited by P.McL.D.Duff (ELBS).
- Hils, E. S., Elements of Structural Geology, Methuen.
- Mukerjee. P. K., A Textbook of Geology, World Press.

Supplementary Reading

• Zumberge J.H. & Nelson C.A., Elements of Geology (3rd edition), John Wiley & Sons, New York.

SEMESTER II

Course Title: **ELEMENTARY PETROLOGY** Course Code: **GEL-I.C-3A** Marks: **75** Credits: **3 (45 contact hours)**

Course Objectives

Petrology is the science of rocks. The course will help the students to exhibit an improved understanding of fundamental petrologic processes and common rock types. In practicals, students learn to identify, describe and classify rocks using hand specimens.

Course Outcomes

On completion of the course the students will be able to:

CO1 Understand the processes involved in the formation of rocks, their textures and structures.

CO2 Classify rocks into their various types – Igneous, Sedimentary or Metamorphic.

CO3 Understand the importance of rocks.

CO4 Differentiate between the different rock types based on their textures, structures and mineralogy.

CO5 Identify the different textures and structures of rocks.

CO6 Describe the mineralogy and properties of, and identify common rock types.

Module I

(15hours)

- Rocks and rock cycle
 - Magma: Definition, formation, composition,
 - Properties: temperature, density, viscosity
 - Bowen's Reaction Series

- o Mode of occurrences of Igneous rocks
- Plutonic: Batholiths (stocks, bosses and roof pendants), Multiple and Composite intrusions.
- $\circ\,$ Hypabyssal: Dykes (Radiating, Arcuate, Ring dykes,), Sills, Laccoliths, Lopoliths
- Extrusive forms: pyroclastics, lava flows and Volcanic necks,
- Central and Fissure type of eruptions
- \circ $\;$ Structures of Igneous rocks : layering, flow banding
- Textures of Igneous rocks aphanitic (glassy), : phaneritic: porphyritic, poikilitic, ophitic, sub ophitic; holocrystalline
 - Classification: Based on chemical composition (TAS diagram)

Module II

(15 hours)

Weathering (, types – Chemical and Physical, and products), Erosion, Transportation and Deposition

Diagenesis

Udden-Wentworth classification based on grain size

Sedimentary structures: Primary (stratification), chemogenic and biogenic

Textures: clastic and non clastic

Sedimentary environments: aeolian, fluvial, glacial and marine

Module III

(15 hours)

Factors controlling metamorphism.

Types of metamorphism: burial, regional and contact,

Metamorphic grade

Metamorphic textures and structures: Foliated and non-foliated.

Index minerals and Isograds

Nomenclature of metamorphic rocks

Protolith: recognition and types (Mafic, Quartzofeldspathic, Pelitic, Calcareous,) Metasomatism

Practical: 1 credit

Maximum Marks: 25

• Megascopic study of Igneous, Sedimentary and Metamorphic rocks.

List of books recommended for reference

Mandatory Reading

- Winter, J D., (2014). Principles of Igneous and Metamorphic Petrology, Pearson Education Limited.
- Gill, R., (2010) Igneous rocks and process A Practical Guide, Wiley-Blackwell
- Boggs S., (2009) Petrology of Sedimentary rocks (2nd edition), Cambridge University Press.

- Tucker E.M. (2001) Sedimentary Petrology (3rd Edition), Blackwell Science Ltd.
- Pettijohn F.J., (1984) Sedimentary Rocks (3rd Edition), CBS Publishers, New Delhi.

Supplementary Reading

- Ehlers, E.G. and H. Blatt., 1982. Petrology, Igneous, Sedimentary and Metamorphic, W.H Freeman, San Francisco.
- Mahapatra G B. A Textbook of Geology, CBS
- Parbin Singh. A Textbook of Engineering and General Geology (Seventh Ed),
- Mukerjee, P K. A Textbook of Geology, World Press.

Course Title: **PRINCIPLES OF STRATIGRAPHY AND PALEONTOLOGY** Course Code: **GEL-II. C-4** Marks: **75** Credits: **3 (45 Contact hours)**

Course Objectives

Stratigraphy and Paleontology, the two branches of Geology work together to unearth the secrets of age from rocks of the earth's crust. Stratigraphers study the composition and arrangement of layered or stratified rocks. Paleontologists study the remains of plants and animals which have been preserved in the earth's crust by natural processes. With these objectives in mind it becomes pertinent to understand the basic concepts of Stratigraphy and Palaeontology.

Course Outcomes

Upon completion of the course, the student will be able to,

CO1 Understand principles of Stratigraphy and concept of Facies.

CO2 Differentiate between absolute and relative age of the earth.

CO3 Explain measurements of geologic time.

CO4 Describe how rocks are correlated.

CO5 Describe types of fossils, conditions and modes for fossilisation, how fossils can be used to locate economic deposits.

CO6 Describe and explain morphology of the hard parts of different phylum's and geological time range.

CO7 Understand map reading and handle clinometer compass.

CO8 Solve problems on bearings.

CO9 Describe and identify fossils/casts/shells w.r.t their morphology and geological age

CO10 Apply classroom teaching to field observations and preparing a geological report.

Module I

(15 hours)

Principles of stratigraphy: Uniformitarianism, Original horizontality, Order of superposition, Faunal succession, Cross-cutting relationship, Inclusions. Principles of stratigraphic analysis, Facies concept in stratigraphy Walther's Law of Facies.

Age of the earth:, radiometric dating; Principles. Measurement of geologic time:

> Time Units: Eon-Era-Period-Epoch-Age Lithostratigraphic/ Rock Units: Group-Formation-Member-Bed Chrono-/ Time stratigraphic units: Erathem-System-Series-Stage Standard Stratigraphic Scale.

Correlation and methods of Correlation:

Paleontological Criteria : Index/Zone fossils

Lithological Similarity: Marker/ Key bed

Structural relations: Tectonic criteria

Brief account of the Geological Formations of Goa.

Module II

Fossils: Mega- Micro-Ichnofossils

Conditions for fossilization; Favourable environments for fossilization. Modes of fossilization: Petrification, Carbonization, Natural moulds and casts Frozen and mummified fossils.

Uses of fossils in locating coal and petroleum deposits.

Module III

Binomial Nomenclature of Organisms and Taxonomy Morphology of the hard parts and geological time range of the following: Phyllum: Arthropoda- Class: Trilobita Phyllum: Mollusca- Class : Pelecypoda

> :Gastropoda :Cephalopoda- Nautiloidea Ammonoidea Belemnoidea

Phyllum: Brachiopoda Phyllum: Echinodermata- Class: Echinoidea

Practical: 1 credit

Maximum Marks: 25

- Map reading
- Use of clinometer compass and exercises on Bearings
- Study of fossils/casts/shells w.r.t their morphology and geological age. •

List of books recommended for reference

Mandatory Reading

- Dana, J.D., (2010), Manual of Geology, Anmol Publications.
- Monroe, J and Wicander, R., (1994). The Changing Earth: Exploring Geology and Evolution, Brooks/Cole
- Black. R M., (1989). The Elements of Palaeontology, Cambridge University Press.

(15 hours)

(15 hours)

- Spencer, E, W, Basic concepts of Historical Geology, Oxford & IBH Publishing Co.
- Koregave, M A., Fundamentals of Invertebrate Palaeontology, Book World Enterprises.

Supplementary Reading

• A Textbook of Geology, P.K Mukherjee (World Press).

SEMESTER III

Course Title: ADVANCEDMINERALOGY AND GEOCHEMISTRY Course Code: GEL-III.C-5A Credits: 3 (45 Contact hours) Marks: 75

Course Objectives

The course provides geoscientific study of mineralogy in understanding the structure, chemistry, optical & physical properties, stability relations and genesis of minerals. With respect to geochemistry the student will understand the distribution of various elements and their abundances in the earth's crust.

Course Outcomes

Upon completion of the course, the student will be able to,

CO1 Understand the concept of Gibbs Phase Rule.

CO2 Correlate structure, chemical composition with physical and optical properties of minerals of major silicate group of minerals.

CO3 Interpret stability relations of minerals using Phase diagrams.

CO4 Understand how minerals originate and associate with each other in a rock

CO5 Understand the geochemical composition of the earth.

CO6 Describe how compatible elements are involved in the various geochemical processes.

CO7 Explain how incompatible elements are involved in the various geochemical processes.

CO8 Evaluate and interpret how geochemistry can be used to interpret tectonic setting.

CO9 Solve applied quantitative problems.

CO10 Plot major oxides in tectonic discriminant diagrams

Module I

Introduction to mineral chemistry, Gibbs Phase Rule, Phase diagram. Structure, mineral chemistry, paragenesis, and Phase diagrams of the following silicate group of minerals:

> Olivine group (Forsterite-Fayalite System) Pyroxene group (Diopside-Anorthite System) Feldspar group (Albite-Anorthite System; Orthoclase-Albite System)

MODULE II

(15 hours)

Structure, mineral chemistry, paragenesis, and stability relations of the following silicate group of minerals:

- Feldspathoid group (Leucite-Silica System)
- ➢ Silica
- > Amphibole
- > Mica

MODULE III

- > Whole rock analysis (major, trace REE)
- > Concept of compatible and incompatible elements,
- > Use of geochemistry in deducing tectonics.
- > Primitive mantle normalized diagram and their significance in petrogenesis.

Practical: 1 credit

Maximum Marks: 25

- 1. Calculation of end-members for olivine, pyroxene and feldspar group of minerals.
- 2. Plotting of major oxides in tectonic discriminant diagrams

List of books recommended for reference

- Deer, W. A, Howie, R. A and Zussman. J., (2013). An Introduction to Rock-Forming Minerals, Mineralogical Society.

- Mason and Berry, (2004). Mineralogy, CBS Publishers, New Delhi.
- Faure, G (1998) Principles and Applications of Geochemistry. Prentice Hall
- White, W M (1997) Geochemistry, Wiley-Blackwell
- Krauskopf, K B and Bird, D K (1995) Introduction to Geochemistry. McGraw-Hill
- Mason, B and Moore, C., (1982). Principles of Geochemistry, John Wiley & Sons.

CourseTitle: PHYSICAL GEOLOGY

(15 hours)

Course Code: **GEL-III.E-1** Credits: **3 (45 Contact hours)** Marks: **75**

Course Objectives: The natural agencies like wind, rivers, glaciers have been moulding and remoulding the surface of the earth over millions of years. This paper aims at the understanding of the processes and the physical forces responsible in developing the surficial features and highlighting the role of these natural agencies in grading and degrading the land surface.

Course Outcomes:

Upon completion of the course, the student will be able to,

- **CO1** Identify the dominant medium of erosion, transportation and deposition in a given area and explain the mechanisms for those processes.
- **CO2** Identify various dessert landforms and explain the processes involved in their formation.
- **CO3** Identify various fluvial landforms and explain the processes involved in their formation.
- **CO4** Identify various Karst topography and features and explain the processes involved in their formation.
- **CO5** Identify various glacial and coastal landforms and explain the processes involved in their formation.
- **CO6** Assign stream order as per Strahler's Method, Analyze various attributes of basin morphometry and drainage.
- **CO7** Prepare and analyze long and cross sections of river profiles from SOI Toposheet.
- **CO8** Deduct the processes involved in shaping the geomorphology of a local area by an integrated approach of applying theoretical knowledge and field based observations.

Module I

(15 Hours)

Weathering and erosion

Earth Systems Affecting Weathering

Mechanical Weathering – Pressure Release, Frost Action, Thermal Expansion and Contraction, Salt Growth, Impact of Organism

Chemical Weathering – Organisms Role, Oxidation, Acid Action, Dissolution/Leaching, Hydrolysis, Spheroidal Weathering Factors Affecting rate of Weathering. Rate of Weathering versus Stability of Minerals

Weathering versus Erosion

Transportation and deposition

Laminar and Turbulent Flow

Agents of Transportation – Wind, Water, Glaciers, Gravity

Modes of transportation – Bed Load (sliding, rolling, saltation), Suspension, dissolved load

Factors Affecting Depositions

Action of Wind

Generation of Winds,

Characteristics of Desert.

Problems Associated with Desertification.

Sediment Transport – Lifting Mechanism, Bed Load and Suspended Load

Desert Landforms:

Depositional: sand dunes, Sand Seas/Ergs, Playa, sabkha

Erosional: Grooves, Ventifacts & Yardangs mushroom rock, Inselbergs, Mesas and Buttes,

Deflation Basin, Desert Pavement and Lag Gravel

Module II

(15 Hours)

Drainage Basin and River System -, Drainage Patterns -

Dynamics of Stream Flow – Discharge, Gradient, Velocity, Sediment Load, Base Level

Concept of Graded Stream

River System and Plate Tectonics

Geological Action of Rivers

Erosion by River

Process of Stream Erosion – Removal of Regolith, Downcutting, Headward Erosion.

Bradshaw Model

Erosional Feature in Upper Course - Steep Valleys, Gorges, Interlocking Spurs, Potholes, Waterfall and Rapid

Erosional Features in Middle and Lower Course – Meander, Ox Bow Lake, Hogbacks, Cuestas

Depositional Landforms by River

Floodplains – Meanders, Point Bars, Natural Levees, Backswamps, Braided Stream

Alluvial Valleys – Step Terraces

Deltas – Formation and Types

Alluvial Fans

Erosion by Groundwater

Karst Topography – Caves, Sinkholes, Solution Valleys, Disappearing Streams, Tower Karst Deposition by Groundwater Speleothems – Stalactites, Stalagmites

Module III

(15 Hours)

Types of glaciers and Glacial Budget Glacier Flow – Surging Glacier, Crevasses Ablation – Melting, Evaporation, Calving Geological Work of Glaciers Erosional Features of Glaciers Erosion Process– and erosional landforms related to valley and continental glaciation. Depositional Features of Glaciers Glacial Drift – Till and Stratified Drift Action of Sea Waves Erosional and depositional features of the coast.

PRACTICAL MODULE: 1 Credit

- Basin Morphometry Perimeter Calculation using rotameter
- Area Calculation Square Grid/Planimeter/Area using triangles
- Stream Ordering (Strahler's Method)
- Drainage Network Morphology Bifurcation and Length ratio
- Basin Geometry Basin Circularity, Intensity of Dissection Drainage Density, Stream Frequency, Hypsometric Curve
- Draw Inference for the Basin based on the result
- Long Profile and Cross Profile of River Upper Course, Middle Course, Lower Course of river from SOI Toposheet. Field visit to nearby area to understand and describe the various physical geology features.

Course Title: **GROUNDWATER AND HYDROGEOLOGY** Course Code: **GEL-III.E-2** Credits: **3(45 contact hours)** Marks: **75**

Course Objectives

To impart knowledge about groundwater, its movement, methods of its exploration, the criteria of its quality, methods of its conservation, recharge of groundwater, monitoring of groundwater quality and quantity.

Course Outcomes

Upon completion of the course, the student will be able to,

CO1 Understand the concept of Groundwater, its sub- surface distribution and sources.

CO2 Explain the rock properties of porosity and permeability affecting the movement of groundwater.

CO3 Differentiate between the various types of aquifers.

CO4 Carry out groundwater exploration by resistivity method.

CO5 Draw flow-nets from groundwater levels.

CO6 Determine water quality based on various parameters.

CO7 Understand the effects of over withdrawal of groundwater and waterlogging, and suggest mitigation measures.

Module I

(15 hours)

Hydrologic cycle and its components

Factors controlling all the components: Evaporation, precipitation, runoff, Infiltration Hydrologic budget

Vertical distribution of ground water

Types of Groundwater: soil water, vaddose, capillary water, Meteoric water

Rock properties affecting movement of ground water:

1) Porosity(primary and secondary), effective porosity, specific retention, controlling factors of porosity

2) Permeability: Darcy's law, laboratory methods of measurement of permeability (constant head, falling head), specific yield, Relation between grain size, porosity, specific yield and specific retention.

Definition of an aquifer, aquiclude, aquitard, aquifuge, and types of aquifers: Unconfined, Confined (Artesian), Perched aquifer.

Module II

Groundwater Exploration: Resistivity methods Groundwater levels and Flow nets Aquifer parameters: 1) Transmissivity, 2) Storativity,3) Hydraulic conductivity: methods of determination (pumping test and tracer test) Drawdown and cone of depression Groundwater quality:

- Parameters :physical ,chemical and biological
- Major, minor and trace constituents.
- o I.S.I standards for drinking water

Module III

(15 hours)

Effects of withdrawal, effects of waterlogging Artificial recharge Saline water intrusion in aquifer Ghyben-Hertzberg relation Pollution of ground water: Arsenic and Fluoride

Practical: 1 credit

Maximum Marks: 25

- Drawing flow nets
- Determination of depth to water table from bore hole data.
- Numerical problems on determination of porosity, bulk density, saturation percentage and void ratio of sample
- Problems based on Ghyben –Hertzberg formulae
- Graphical presentation of chemical data of water
- Resistivity survey (demonstration)

List of books recommended for reference

Mandatory Reading

Course Title: ORE GENESIS Course Code: GEL-III.E-3A Credits: 3 (45 contact hours) Marks: 75

Course Objectives: The course aims at understanding the various types of mineral deposits, classification, their mode of occurrence, geologic & geographical distribution and genesis. It primarily focuses on the processes of formation of ore deposits. Furthermore, it also aims at identification of economic minerals in hand specimens.

Course Outcomes

Upon completion of the course, the student will be able to,

CO1 Differentiate between rock-forming minerals and ore minerals.

CO2 Understand the basis of classifying ore minerals.

CO3 Understand the origin and stages of ore formation.

CO4 Classify the various ore minerals under categories such as magmatic, hydrothermal, volcanogenic etc.

CO5 Explain the processes involved in the formation of ore deposits.

CO6 Understand the genesis and occurrence of various ore deposits in India.

C07 Evaluate ore minerals in hand specimen using their physical properties.

Module I

(15 hours)

Goldsmith geochemical Classification

Tenor, Prospects, Resource & Reserves of ore minerals

Classification of Ore Deposits:

Modified Lindgren's Scheme; Bateman Scheme; Based on Tectonic Setting Processes Forming Mineral Deposits

Requirements for Ore deposit formation

Syngenetic & Epigenetic deposits

Magmatic Ore Forming Processes

Orthomagmatic ore formation (Bushveld; Sudbury)

Ore deposits at mid-ocean ridges (Black & White Smokers) and in ophiolites (podiform chromites)

Ore formation related to alkaline magmatic rocks, carbonatites and kimberlites Ore deposits in pegmatites

Module II

(15 hours)

Magmatic-Hydrothermal Ore Forming Systems

Hydrothermal ore formation (Source of Hydrothermal Solutions; Textures & Structures; Host rock alteration)

Volcanogenic ore deposits (VMS; Terrestrial epithermal gold, silver and base metal)

Porphyry copper (Mo-Au-Sn-W) deposits

Hydrothermal-metasomatic ore deposits

Skarn, Greisen

Supergene Ore Formation Systems

Residual (eluvial) ore deposits

Supergene enrichment by descending (vadose) solutions Sedimentary Ore Formation Systems Black shales in metallogenesis (European Copper Shale) Autochthonous iron and manganese Deposits Sediment-hosted & submarine-exhalative (sedex) base metal deposits Mississippi Valley type (MVT) Lead-Zinc deposits Placer deposits Metamorphic Ore Forming System Orogenic Cu-Zn-Au deposits Ore Deposits in Space and time Metallogenic Epochs Plate Tectonic Setting of Ore Deposits

Module III

(15 hours)

Indian occurrences of Metallic Deposits: Iron Manganese Chromium Copper-Lead-Zinc Gold Non metallic Deposits: Diamond, Baryte, Bauxite, Nuclear Minerals Industrial Minerals (Refractory, Abrasives, Cement, Fertilizer, Electrical and Electronics).

PRACTICAL MODULE = 1 Credit

- Descriptive evaluation of ore minerals in hand sample
- Introduction to reflected light microscopy of ore minerals (demonstration) Site visits to local mineralized geology

REFERENCE BOOKS

For Ore Forming Process: (E-books Available of All)

- 1. Pohl, L.W., 2011. Economic Geology Principles and Practice. Wiley-Blackwell

- 3. Tiwari, A.K., 2010. Ore Geology, Economic Minerals and Mineral Economics. Atlantic
- 4. Gokhale, G.V.G.K., 1983. Ore Deposits of India. CBS Publishers, New Delhi

Mandatory Reading

Principle Reference books used for course preparation will be Economic Geology by Walter Pohl and Economic Geology by Umeshwar Prasad.

Course Title: MARINE GEOLOGY Course Code: GEL-III.E-4 Credits: 3 (45 Contact hours) Marks: 75

Course Objectives:

To provide knowledge on essential concepts of oceanography. To study the tectonics, geology, economic resources w.r.t. the oceans.

Course Outcomes:

Upon completion of the course, the student will be able to,

CO1 Understand ocean bathymetry and learn to identify features of the ocean floor such as mid ocean ridges, seamounts, guyots, hydrothermal vents, pillow basalts, trenches.

CO2 Relate the ocean features to its tectonic origin.

CO3 Understand the various processes which generate ocean currents.

CO4 Classify marine sediments into four broad categories based on their origin i.elithogenous, hydrogeneous, biogenous, cosmogenous.

CO5 Identify the characteristics of important marine resources for the future such as polymetallic nodules and gas hydrates.

CO6 Recognise how near shore geological processes shape coastlines over time

Module I

(15 hours)

Ocean basins: Shape, size of the Pacific, Atlantic and Indian Oceans Coriolis Effect Ocean circulation Ocean salinity Techniques used to study ocean bathymetry Concept of Plate Tectonics and ocean floor spreading, Magneto stratigraphy

Module II

(15 hours)

(15 hours)

Marine Provinces Morphological features of the ocean floor; Mid Oceanic Ridges and its features; Abyssal plains and its features Ocean trench and its features Continental slope and shelf and their features Ocean islands: Hot spot, Atolls

Module III

Clastic Sedimentation in different marine environments:

Biogenic sedimentation

Chemogenic sedimentation

Near coastal geological processes

Coastal Zone Regulations (CRZ), Exclusive Economic Zone (EEZ); Minerals in the EEZ of India.

Mineral deposits

Practicals = 1 credit

- Preparation of salinity and ocean current map.
- Drawing and labeling of ocean profile.
- Preparation of ocean resource distribution maps
- Visits to National Laboratories engaged in Ocean Research such as NIO and NCAOR.

List of books recommended for references:

SKILL ENHANCEMENT COURSE (SEC)

Course Title :**Operational Geology and Gemmology** Course Code :**GEL-III.SEC-1** Credits :**4 (60 Contact hours)** Marks :**100**

Prerequisites: Students should have their own laptops XII level knowledge of Physics

Course Objectives

- The objective of the course is to provide skills to equip students with the basic skills of data management and analysis in MS Excel.
- The course deals with introduction to simple Excel functions and tools that are commonly used in day-to-day data management.
- Further the course deals with using Excel for Drill hole database management.
- To introduce students to the study of gemstones.

Course Outcomes

Upon completion of the course, the student will be able to,

CO1Manage any data in a more systematic manner in excel spreadsheets. **CO2**Perform basic data analysis on a given set of data using Excel tools

CO3 Explain the phases and processes involved in a drilling project.

CO4 Explain the various types of data that is generated in a drilling project

CO5 To create a drill hole database in Excel.

CO6Decide the factors deciding cost of a gemstone.

C07 Explain the causes of colours in gemstones

CO8Explain how gemstones are synthesized.

CO9Explain how gemstones are enhanced from low-grade to saleable quality.

CO10 Explain the styles of cuts preferred for different gemstones

Module I

Introduction to Excel

Overview of the User Interface, Overview of Workbooks, Editing and Formatting Worksheets

Excel Tables: creation, editing, sorting and filtering of data, conditional formatting, Text to column, Merging and splitting of data.

Formulas and Functions

Statistical functions: mean, mode, variance, standard deviation, Kurtosis

Introduction to charts and Graphs

Setting page layout for printing

Module II Drill hole data management in Excel Overview of drilling project: Surveying, geological mapping, Borehole logging, sampling process. Survey data collection Sampling data- Quality assurance and Quality control (QAQC): data collection and data analysis, scatter plots and control charts. Management of drill hole data in excel: types of files (mandatory and optional files) Data collection, entry and modification and validation.

Module III

(15 hours)

Introduction to Gemmology Association of Gemstones with rocks Factors deciding the cost of a gemstone Causes of colour in gemstones International grading of diamonds Composites

Module IV

Enhancement and Treatments of gemstones Synthesis of gemstones Need for Faceting Styles of cut Visual observation of gemstones

- ▶ Webster, R., edited by Anderson, B, W., (1983) Gems: Their Sources, Descriptions and Identification, Butterworth-Heinemann Ltd.

(15 hours)

SEMESTER IV

Course Title: **STRUCTURAL GEOLOGY** Course Code: **GEL-IV.C-6** Marks: 75 Credits: 3 (45 Contact hours)

Course Objectives

The course is designed for the students to understand the geometry and mechanics of the various geological structures that result through the deformative processes operative within the earth.

Course Outcomes

Upon completion of the course, the student will be able to,

CO1 Gather knowledge about the geometry of various structures acquired by rocks at primary and secondary stages.

CO2 Understand the concepts of stress and strain.

CO3 Understand the application of stress and strain in rock deformation.

CO4 Identify rock structures and deformities like joints, folds and faults.

CO5 Understand a structural separation in geological context based on unconformities.

CO6 Identify secondary structures developing in rocks.

CO7 Interpret geological maps

CO8 Solve structural problems based on provided data.

Module I

15 hours

Primary and secondary structures. Concept of rock deformation. Stress and Strain in rocks, 2-D stress and strain analysis; Strain ellipses of different types and their geological significance.

Module II

15 hours

Unconformities. Joints: Joints and fracture mechanics, classification of joints. Faults: Terminology, classification, criteria for faulting. Diapirs (salt domes)

Module III

Cleavage and foliation: types, origin and relation to major structures. Lineations- Description and origin of lineation.

15 hours

Folds- morphology; Geometric and genetic classification; Mechanics and causes of folding

Lineation and relationship with folds

Practicals :Credit 1

Maximum Marks: 25 Solving Geological Maps Completion of Outcrops Stereographic Projection of Structural Data Graphical Solution for Structural Problems

List of recommended reference books:

Mandatory Reading

- Hobbs, B and Alison, O. R. D., 2014. Structural Geology: The Mechanics of Deforming Metamorphic Rocks, Elsevier Science Publishing Co. Inc
- Fossen, H., 2010. Structural Geology, Cambridge University Press.
- Twiss, R. J and Moores, E. M., (2006). Structural Geology, W H Freeman and Company.
- Pollard, D. D and Fletcher, R. C., (2005). Fundamentals of Structural Geology, Cambridge University Press.
- Davis, G. H., (1996). Structural Geology of Rocks and Regions, Wiley
- Hatcher, R., (1995). Structural Geology: Principles, Concepts and Problems. Pearson.

Course Title: **ENGINEERING GEOLOGY** Course Code: **GEL-IV.E-5A** Marks: **75** Credits: **3 (45 contact hours)**

Course Objective

To impart sufficient knowledge of engineering geology so as to be able to anticipate the technical problems related to geology of various engineering sites and suggest possible remedial measures.

Course Outcomes

Upon completion of the course, the student will be able to,

CO1 Understand issues related to geological basement and structure of a region.

CO2 Identify the characteristics of basement rock formations and problems associated with them.

CO3 Describe and interpret geological structures in geological maps and drawing cross sections.

CO4 Assess the area appropriately suggested for a geotechnical project and apply the geological knowledge for a safe and secure construction and operation of a geotechnical project.

CO5 Suggest remedial measures to encounter the problems detected.

CO6 Interpret core logs and suggest suitable remedial measures.

CO7 Collect data interpret and analyse it to solve problems associated with the engineering project as well as the environment.

CO8 Explore and suggest novel ideas using geological background for the geotechnical project.

CO9 Suggest Site feasibility based on geological maps.

CO10 Carry out physical and mineralogical descriptions of cores.

CO11 Draw relationship of core log to RQD values

CO12 Compute reservoir area, catchment area, reservoir capacity.

C013 Solve numerical problems on ultimate strength of rocks

Module I

(15 hours)

Aim of engineering geology

Porosity and permeability of rocks

Principles of mechanical behaviour of rock materials

Engineering properties of rocks; specific gravity, compressive strength, hardness, toughness.

Soil profile and Engineering properties of soil;

Role of structures (joints, fractures, folds, faults) and water/fluids in engineering geology

Use of rocks / aggregates in construction

Module II

(15 hours)

Role of engineering geologists in planning, design and construction of major manmade civil structural features.

Methods of site investigation

Introduction to core logging

Geological investigations/geotechnical problems related to groundwater occurrence,

Module III

(15 hours)

Geological investigations for landslides, bridges and tunnels -design and construction. Geological investigations in dams and reservoirs. Case studies of dam failures Site improvement methods

Practical: 1 credit

Maximum Marks: 25

- Site feasibility based on geological map.
- Physical and mineralogical descriptions of cores,
- Relationship of core log to RQD values
- Computation of reservoir area, catchment area, reservoir capacity
- Numerical problems on ultimate strength of rocks

List of recommended reference books.

Course Title: **OPTICAL MINERALOGY** Course Code: **GEL-IV.E-6A** Marks: **75** Credits: **3 (45 Contact hours)**

Course Objectives

The objective of the course is to provide the basics of geoscientific studies in Optical Mineralogy involving optical properties of minerals in plane polarized light, in between crossed polars and convergent light. Further, it will strengthen their knowledge in understanding of optical indicatrices and determination of optic sign of minerals. The knowledge of optics is applied in understanding and identification of minerals.

Course Outcomes

Upon completion of the course, the student will be able to,

CO1 Understand basic concepts in optical mineralogy wrt relief, pleochroism, character between crossed polars, extinction and their types, interference colours, zoning and twinning.

CO2 Correlate elementary principles of optics to crystal optics.

CO3 Distinguish Uniaxial and Biaxial Indicatrix

CO4 Understand the concept of formation of Interference colours and determine their orders as per Newton's Scale.

CO5 Handle Petrological Microscopes.

CO6 Identify major rock-forming minerals in microsections.

C07 Detect Optic Sign for Uniaxial and Biaxial Minerals using Interference Figures.

CO8 Determine Anorthite content of Plagioclase.

CO9 Calculate Optic Axial Angle.

Module I

Introduction: Nature of light, Polarized light, Refractive Index, Critical angle and Total Internal reflection, Wave Surface, Double Refraction.

Parts and working of a Polarizing / Petrological microscope

Properties of minerals in Plane Polarised Light (PPL): Colour, Form, Cleavage/Cracks; Relief, Twinkling; Pleochroism,

Pleochroic halos.

Module II

Optical characters of minerals: Isotropism and Anisotropism

Properties of minerals Between Crossed Polars (BXP): Interference colours: Formation, Newton's Scale, Anomalous interference colours;

Extinction and Extinction types.

Twinning and Zoning

Alteration, Inclusions.

Module III

Optical accessories Uniaxial indicatrix **Biaxial indicatrix Convergent Light: Principle Uniaxial Interference Figure Biaxial Interference Figure Optic sign of Uniaxial and Biaxial Minerals** 2V and 2E

(15 hours)

(15 hours)

Practical: 1 credit Maximum Marks: 25

- Identification of common rock forming minerals based on optical properties
- Interference figures (Demonstration)
- Determination of optic sign (demonstration)
- Determination of An-content using extinction angles (demonstration)

List of books recommended for reference

Mandatory Reading

- Kerr, P., (1977), Optical Mineralogy, McGraw Hill Publishers.
- MacKenzie, W. S and Guilford, C., Atlas of Rock forming minerals in thin section_

Supplementary reading

• Cornelis, K and Cornelis, H. (1993). Manual of Mineralogy, John Wiley and Sons Ltd.

Course Title: NATURAL HAZARDS AND MANAGEMENT Course Code: GEL-IV.E-7 Marks: 75 Credits: 3 (45 Contact hours) Prerequisites: GEL-III.E-1

Course Objectives

The course is designed with an aim to give the student an understanding about: various natural hazards; stages in management aimed at avoiding and /or reducing loss to life and property; and Agencies involved in mitigation and management of damage due to hazards.

Course Outcomes

Upon completion of the course, the student will be able to,

CO1 Understand the causes, effects and mitigation measures for natural hazards such as droughts, floods, cyclones, volcanic eruptions, tsunami, landslides & subsidence, salinity hazards, coastal erosion.

CO2 Appreciate the CRZ act and its impact on disaster mitigation.

CO3 Understand the framework and roles of various bodies under the National disaster management plan of India.

CO4 Prepare a simple disaster management plan for a building/unit.

Module I

Classification of hazards: Natural and man-made disasters

Droughts: types, causes, mitigation

Floods: causes and effects, prediction, Cloud burst/Flashfloods, remedial measures

Cyclones: Structures, origin, effects, prediction, path tracking and early warning systems.

Module II

(15 hours)

Volcanic eruption: Types, localization, volcanic hazards and mitigation Earthquakes: Causes, Magnitude and intensity, Recording, effects and preparedness, Earthquake Zonation Map.

Tsunamis: relation of Tsunamis to tectonics; Damage due to tsunamis, Coordinated approach to early warning of tsunamis.

Landslides and Avalanches: Classification of mass wasting, mechanics, causes of landslides and stabilizing methods of slopes; civil engineering measures. Subsidence: Causes, slow and brisk types

Module III

Salinity hazards: Inland and coastal

Coastal erosion and mitigatory measures

CRZ act and its impact on disaster mitigation

National Disaster Management: national and international support

Planning strategy: co-operative plan, identifying resources, setting priorities.

Hazard coping operations and rehabilitation

Proposed operational processes for individual Natural Disasters mentioned above. Case study of Parvatibai Chowgule College Disaster Plan

Practical: 1 credit Maximum Marks: 25

- Hazard zonation map of India: ,earthquakes, floods droughts, landslides and Cyclone
- Discussing disaster management plan for Parvatibai Chowgule College
- Land-use land cover mapping

List of books recommended for reference Mandatory reading

Course Title: GEOTECTONICS Course Code: GEL-IV.E-8 Marks: 75 Credits: 3 (45 Contact hours)

Course Objectives

Ever since the creation of the earth, there have been marked changes in the distribution of land and sea. The dynamics of these changes are stupendous. The subject of Geotectonics aims at understanding the mechanism of such changes and explaining the structure of the earth and the processes responsible for the movement and redistribution of continents and seas.

Course Outcomes

Upon completion of the course, the student will be able to,

CO1 Gain an insight into the study of the earth's interior using seismic data.

CO2 Understand the various layers of the earth's interior and the mechanism of plate tectonics.

CO3 Explain the origin and nature of the earth's magnetic field and palaeomagnetism.

CO4 Understand the theory of Continental Drift along with supporting evidences.

C05 Explain mountain building (orogenesis) and its relation with plate tectonics.

CO6 Identify and plot various tectonic features on the earth's surface.

Module I

Interior of the earth:

Clues from the study of earthquake and density;

The earth's layers; the crust-continental crust and oceanic crust;

Crust-mantle boundary

Structure of the mantle

Low Velocity Zone (LVZ)

Core-mantle boundary; P wave shadow zone,

Nature of the core; S wave shadow zone.

Earth's Magnetic field:

Origin and nature

Dynamo hypothesis and Herndon's Georeactor Theory.

Geocentric axial dipole,

Paleomagnetism,

Marine magnetic anomalies,

Magnetic reversals and magnetic stripes

Module II

Continental drift:

Wegener's hypothesis.

• Evidences: Continental fit; similarity of rock sequences and mountain ranges; glacial evidence, fossil evidence;

Paleomagnetism and Polar wandering.

Plate tectonics:

Plate margins, plate boundaries and associated activities,

Triple junctions;

Divergent, Oceanic Ridges, Sea floor spreading, transform faults; hotspots. Convergent: oceanic-oceanic, oceanic-continental, continental-continental;

oceanic trenches, subduction zones

Transform boundaries;

Wilson Cycle (Rift valleys, the Red sea and the Gulf of Aden)

Geometrical aspects and mechanism of plate motion.

Module III

(15 hours)

Mountain building: Orogenesis

(15 hours)

Plate boundaries and orogenesis: Orogenesis at oceanic-oceanic plate boundaries, oceanic-continental plate boundaries and continental-continental plate boundaries.

Case study: Tracking the rise of Himalayas.

Case study: Frequency of Earthquakes in North India

Case Study: Occurrence of Tsunami in SE Asia

Practical: 1 credit

Maximum Marks: 25

- Plotting of oceanic ridges, trenches, subduction zones, sea mounts, plate boundaries
- Exercises in plate tectonics.

List of books recommended for reference

Mandatory reading

SKILL ENHANCEMENT COURSE (SEC)

Course Title :**GIS for Beginners** Course Code :**GEL-IV.SEC-2** Credits :**4 (60 Contact hours)** Marks :**100**

Requisites

Students should have their own laptops compatible with the latest long term release of QGIS, Google Earth.

Basic knowledge of computers.

Strong desire to learn new technologies and innovative thinking.

Course Objectives

To impart GIS training in Spatial data visualization techniques, Creating Geospatial datasets, Working with mobile Global Positioning System (GPS) data, tabular data, and raster data, Accessing open source data, Visual image interpretation, Terrain analysis.

Course Outcomes

Upon completion of the course, the student will be able to,

• **CO1:** become proficient in the use of leading open source GIS platforms QGIS.

- **CO2:** use open source GIS platforms Google Earth Pro.
- **CO3:** use mobile GPS to collect field data and convert it into Suitable GIS data formats.
- **CO4:** extract geospatial data from both hardcopy maps and open source GIS portals.
- **CO5:** visually identify various features such as landforms, geologic structures, manmade structures etc on satellite imagery.
- **CO6:** apply GIS techniques such as those used for analyzing and presenting water quality data.
- **CO7:** apply GIS techniques such as those used for analyzing and presenting terrain data.
- **CO8:** produce aesthetically pleasing and informative maps.
- **CO9:** create Webmaps using Google My Maps.
- **CO10:** prepare and execute a simple GIS project in their domain of study.

Tools exposed:

We will use open source GIS – QGIS software, Google Earth Pro®, GPS Essentials (for Android phones) throughout the programme.

Module I – Basics of GIS

(15 hours)

What is GIS? - Installing QGIS, QGIS interface

Spatial Data Model Concepts: Raster and Vector data - Loading spatial data and visualization in QGIS

Coordinate Reference Systems Concept - Projecting and re-projecting data in QGIS.

Concept of Georeferencing - Georeferencing a Toposheet: Using GCP's, Image to Image Registration.

Data creation: Digitization - Data handling and storage in GIS, Creating Data Layers: Point, Line and Polygon, Editing Tools and Functionalities, Symbology/Styling

Working with Mobile GPS - GPS essentials app, collecting Geotagged photographs and data.

From excel to GIS - CSV TO Point layer, Attribute joins from table.

Module II – Visual Image Interpretation and Open source data (15 hours)

Overview of Google Earth pro - Installing Google Earth Pro, Interface and working in Google earth pro.

Elements of Visual Image Interpretation: Tone, Texture, Pattern, Shape, Size, Association - Image interpretation using Google Earth Satellite Imagery: Manmade features.

Elements of Visual Image Interpretation: Tone, Texture, Pattern, Shape, Size, Association - Image interpretation using Google Earth Satellite Imagery: Coastal features.

Elements of Visual Image Interpretation: Tone, Texture, Pattern, Shape, Size, Association - Image interpretation using Google Earth Satellite Imagery: Geological Features and landforms.

QGIS plugins - Open Street Maps, Open Layers, MapLibrary

Open Source Data - Overview of Bhuvan portal

Module: III –GIS Analysis and Cartography [Map making] (15 hours)

Working with Tabular Data - Field Calculator:Calculating area under a polygon, generate Simple statistics of a vector field, selecting features by expressions.

Working with vector data - Convex Hull, Clipping, Buffer, Dissolve, Merge Shapefiles

Working with Raster Data using DEM - Raster merge and clip using DEM, Reprojecting DEM

Terrain Analysis – Hillshade, Slope, Aspect, Creating layer mask, Profile tool, 3D modelling

Working with groundwater data - Interpolation and Contouring from point data.

Advance cartography and styling - Blending modes, styling by attribute size, symbols, Labels, colour schemes, transparency, textured polygons.

Map Creation - Map Composer- TODALS

Web maps - Google MyMaps

Module IV – GIS applications Case studies and Project

Students are expected to execute a meaningful GIS project with their own data or data from open source databases preferable in their subject domain.

SEMESTER V

Course Title: **SEDIMENTARY PETROLOGY** Course Code: **GEL-V. C-7A** Credits: **3 (45 Contact hours)** Marks: **75**

Course Objectives

To provide an understanding of the origin of sedimentary rocks, the relationship of sedimentary processes to plate tectonics, and the use of sedimentary rocks in the study of the geological past.

Course Outcomes

Upon completion of the course, the student will be able to,

CO1 Understand the processes leading to the formation of sedimentary rocks.

CO2 Identify and explain the various textures and structures of sedimentary rocks.

CO3 Relate different sedimentary facies with the environment of deposition.

CO4 Describe and identify the textures, structures and mineral composition and origin of various clastic and non-clastic sedimentary rocks.

Module I

(15 hours)

The Origin of Sedimentary Rocks:

Erosion, transportation and deposition of sediments. Hjulstrom's diagram

Provenance

Components of clastic sediments: Heavy, Clay, Quartz, Feldspars, other minerals Environment of deposition and sedimentary facies Basins - Plate tectonics and sedimentation

Sedimentary Textures

Grain Size, Udden-Wentworth Size Scale, Phi Scale, Roundness and Sphericity. Maturity: Textural, Mineralogical and Chemical Classification of Sedimentary rocks (Folk's and Dunham's, Okhadas)

Module II

Primary sedimentary structures Depositional, Erosional Secondary sedimentary structures Chemical, biogenic Soft sediment deformations

Module III

Clastic Sedimentary Rocks Sandstones, Breccias and Conglomerates: Textures, Structures, Mineral composition, Textural maturity, Mudrocks: Structures, Colour, Mineral composition; Non-clastic Sedimentary Rocks Limestones and Dolomites: Textures; Mineralogy; Structures; Diagenesis, Reefs and Palaeoclimate; Dolomites: Dolomitization. Residual: (Laterite and Bauxite) Origin and Climate. Carbonaceous sediments: Nature and form of organic residues; The Coal series

(15 hours)

Practical Course: 1credit

Maximum Marks: 25

- Study and identification of sedimentary rocks w.r.t textures, structures, their classification.
- Study of sedimentary rocks in thin sections
- Exercises in grain size and shape analysis.

List of books recommended for reference

CourseTitle: **PRECAMBRIAN STRATIGRAPHY OF INDIA** Course Code: **GEL-V.E-9B** Credits: **3 (45 Contact hours)** Marks: **75**

Course Objectives

The Peninsular India is a shield comprising of composite crustal blocks of Archean antiquity and therefore it preserves record of the various tectonic events that this land has witnessed. This course aims at providing a basic understanding of the various stratigraphic units and the correlation of International Geological Time Scale with Indian Stratigraphic Time Scale. It aims to provide understanding of the Precambrian geology, stratigraphy, fossil content and the economic resources of the lithounits from the Peninsular India.

Course Outcomes

Upon completion of the course, the student will be able to,

CO1 Understand evolution and stabilisation of the Archean cratons in India with special emphasis on Dharwar craton.

CO2 Understand the tectonics behind Mobile Belts of India

CO3 Differentiate between western Dharwar Craton and Eastern Dharwar Craton.

CO4 Interpret geological and geochemical differences of the basement rocks for Sargur (Gorur Gneiss) and Dharwarian (Peninsular Gneissic Complex)

CO5 Relate the lithostratigraphy of Sargur and Dharwar Schist Belt and correlate it with the Goa Group of rocks.

CO6 Understand the Purana basins in India with emphasis on Cuddapah Vindhyans and Kaladgis.

CO7 Identify specimens representing rock Formations in Goa

CO8 Assigning stratigraphy Formations based on fossils.

CO9 Solve problems in stratigraphic correlation

Module I

(15 hours)

Physiographic subdivisions of India and their distinctive characters. Geology of India

- Cratonic provinces of Peninsular India shield: (Dharwar craton/ Singhbhum craton,/Bundelkhand craton/, Aravalli craton,/ Bastar craton) and their economic importance, with emphasis on the Dharwar craton.
- Mobile Belts of Peninsular India: Eastern Ghat Mobile Belt, Satpura Mobile Belt, Pandayan Mobile Belt

Module II

Gorur Gneiss

Sargur Supracrustals

Dharwar craton: Eastern Dharwar Craton (Deccan Batholith) and Western Dharwar Craton (Peninsular Gneiss)

Greenschist/Greenstone Belts of Peninsular India:

Dharwar type Greenstone Belt: Dharwar Supergroup: Bababudan Group, Chitradurga Group

Goa Group of rocks

Kolar type greenstone Belt: Kolar

Module III

Proterozoic Basins of Peninsular India:

(15 hours)

Vindhyan Supergroup;

Cuddapah Supergroup;

Kaladgi Supergroup.

Outline of Bhīma Supergroup, Delhi Supergroup, Kurnool Supergroup

Practical: 1 credit

Maximum Marks: 25

- Study of specimens representing rock formations of Goa.
- Assigning stratigraphy Formations based on fossils.
- Maps related to Indian Geology/ Problems in stratigraphic correlation.

List of books recommended for reference

Mandatory Reading

- Dessai, A G (2018). Geology and Mineral resources of Goa. New Delhi Publishers
- Mascarenhas, A and Kalavampara, G., (2015). Natural Resources of Goa: A Geological Perspective. Geological Society of Goa.
- Ramakrishnan, M and Vaidynadhan, R., (1994), Geology of India, Geological Society of India Publication, Bangalore. Vol. I and II.

Supplementary Reading

- Valdiya, K. S., (2015). The making of India: Geodynamic evolution, Springer
- Nanda, H., (2014), Indian Stratigraphy, Anmol Publications Pvt. Ltd. New Delhi.
- Sharma, R. S., (2009). Cratons and fold belts of India, Springer

Course Title: **PETROLEUM GEOLOGY** Course Code: **GEL-V.E-10** Credits: **3 (45 Contact hours)** Marks: **75**

Course Objectives

The course aims to provide the students an understanding of essential and basic concepts of Petroleum Geology, the process and the operations involved in Petroleum exploration & extraction and to provide knowledge on the petroliferous basins of India.

Course Outcomes

Upon completion of the course, the student will be able to,

CO1 Describe the Physical & chemical properties of Hydrocarbons.

CO2 Compare various exploration techniques involved in hydrocarbon detection.

CO3 Understand the process of drilling & completion of a Petroleum well.

- **CO4** Prepare isopach maps.
- **CO5** Delineate and describe the petroliferous domains in India.

CO6 Analyse well logs.

Module I

Introduction and Aspects of Petroleum Geology, Characteristics of Hydrocarbons (Physical and Chemical properties), Petroleum System, Composition, Origin (Types of Kerogen), Occurrence, Migration and Accumulation of Petroleum; Petroleum traps (Stratigraphic and Structural); Reservoir rocks, conditions & mechanisms.

Functions of Petroleum Geologist Understanding oil and gas: Exploration, Drilling and Completion, Production, Services

Module II

(15 hours)

(15 hours)

Surface indications and direct detection of Hydrocarbons Surface and Subsurface exploration techniques: Concept Geophysical methods of exploration: Gravity and Seismic methods Types of rigs and its selection Rotary drilling system and equipment's Drilling sequence: Coring; Casing and Cementation and Drilling fluids;

Module III

(15 hours)

GeoLogging and Well logs (Electric, Radioactive and Acoustic); Formation evaluation and Testing

Well Completion and Stimulation

An outline of the oil belts of the world; Global geographic and stratigraphic distributions of oil and gas;

Important Onshore and Offshore Petroliferous basins of India.

Recent trends in Petroleum Geology.

Practical Course: 1 credit

Maximum Marks: 25

- Plotting of Petroliferous basins on maps (World and India)
- Problems based on Well log interpretation
- Creation of carbonate isopachous maps
- Problems on mud circulation
- Observations of well cuttings and cores samples
- Demonstration/Determination of porosity

List of books recommended for reference

Course Title: **METAMORPHIC PETROLOGY** Course Code: **GEL-V. E-11A** Credits: **3 (45 Contact hours)** Marks: **75**

Course Objectives

To provide essential concepts of metamorphism and metamorphic rocks. To study metamorphic rocks w.r.t fabrics and types. To understand the concept of facies. Also to understand how metamorphism is related to plate tectonics

Course Outcomes

Upon completion of the course, the student will be able to,

CO1 Understand metamorphism and their upper and lower limits and study metamorphic concepts like factors, types of metamorphism and facies.

CO2 Apply fundamental principles of metamorphism to development of textures.

CO3 Classify metamorphic rocks based on mineral assemblage and fabric.

CO4 Relate the types of metamorphism with the product.

CO5 Represent metamorphic rocks graphically using Phase Diagrams.

CO6 Correlate deformation with grade of metamorphism.

CO7 Evaluate how the different factors like temperature, pressure, protolith, chemically active fluids and time control metamorphism.

CO8 Interpret tectonic setting of Metamorphic Belts based on field characters and kinematic stress indicators.

CO9 Interpret the metamorphic processes combining the evidences derived from hand specimens, microsections and protolith.

CO10 Differentiate between Barrovian and Buchan Zones

CO11 Apply the facies concept to progressive contact and regional including burial metamorphism.

C012 Identify textures of metamorphic rocks in hand specimens.

CO13 Identify textures, structures, mineralogy of metamorphic rocks in thin sections

Module I

(15 hours)

Definition and explanation of metamorphism (upper and lower limits) and metamorphic rocks.

Factors controlling metamorphism:

Heat (T): Geothermal gradient (in different crustal regions), Radioactivity, magmatic intrusions, tectonics;

Pressure (P): Deviatoric, Lithostatic, Hydrostatic, Fluid pressure

Chemically active fluids (X_f): H₂O and CO₂

Composition of the parent rocks (X): pelites, mafites, ultramafites, quartzofeldspathic, carbonate rocks, sandstones and greywackes.

Time (δt): Role of time in metamorphism.

Phase Rule and Phase diagrams Graphical representation of metamorphic rocks. Protoliths.

Types of metamorphism: Regional metamorphism its characteristics and products, burial metamorphism its characteristics and products, contact metamorphism its characteristics and products.

Relationship of brittle and ductile deformation with grade of metamorphism metasomatism, cataclastic metamorphism and their products, impact/shock metamorphism.

Metamorphism in relation to plate tectonics:

Divergent(constructive) boundary

Convergent (Destructive) boundary: subduction zone (sensu lato)

Continent-Continent Collision zones

Intra-plate environments

Module II

(15 hours)

Metamorphic textures: Inherited/Relict fabric lepidoblastic, nematoblastic, granoblastic, equigranular mosaic, Porphyroblastic; cataclastic and mylonitic textures.

Kinematic stress indicators and their role in interpreting tectonic history

Nomenclature and classification based on mineralogy and fabric

Field characters of metamorphic rocks:

Variations in mineralogy and fabric. Prograde and Retrograde metamorphism metamorphic zones and index/critical minerals, their significance in mapping and understanding tectonic history.

Module III

(15 hours)

Facies: Concept after Goldschmidt and Eskola; Zonation in mineralogy – Buchanan (Low pressure) Barrovian (high pressure).

- Facies of progressive contact metamorphism: characteristic mineral assemblages in pelites and carbonates (pure and impure) protolith
- Facies of progressive regional metamorphism characteristic mineral assemblages wrt facies (Zeolite, Prehnite-Pumpellyite, Greenschist, Amphibolite, Granulite,) in pelitic, mafic protolith.

Facies of burial metamorphism: Blueschist, Eclogite Paired Metamorphic Belts

Practical Course: 1 credit Maximum Marks: 25

- Megascopic study and identification of metamorphic rocks w.r.t mineralogy, texture, type of metamorphism, facies, protolith.
- Microscopic study and identification of metamorphic rocks wrt to mineralogy, texture type of metamorphism, facies and protolith.
- Plotting ACF diagrams and commenting on the protolith.

Course Title: **REMOTE SENSING AND DIGITAL IMAGE PROCESSING** Course Code: **GEL-V.E-12** Credits: **3 (45 Contact hours)** Marks: **75** Mandatory requirement: **Individual Laptop with MS Windows OS**

Learning Objectives

This course is designed as an introduction to the use of remote imaging in geologic applications. The basic concepts of image production, processing and interpretations are covered.

Course Outcomes

Upon completion of the course, the student will be able to,

CO1 Explain remote sensing principles, purposes, advantages and limitations.

CO2 Define and describe electromagnetic spectrum and interactions with various types of media.

CO3 Describe characteristics of remote sensing imagery.

CO4 Describe sensors and image acquisition methods.

CO5 Search and download satellite imagery from online portals such as Bhuvan, USGS Earth explorer.

CO6 Understand the application of digital imagery for interpretation of lithology, Structure and geomorphology

CO7 Prepare various maps using Quantum GIS and Google Earth.

Module I

(15 hours)

Energy Sources and Radiation Principles. Electromagnetic Spectrum Energy interactions in the Atmosphere: Scattering, Absorption. Atmospheric windows Energy interactions with earth surface features: Spectral Reflectance of rock, Soil water, and vegetation. Photo recognition elements The concept of resolution: Spatial, Spectral, Temporal and Radiometric. Space Borne Imaging Systems- The Landsat, IRS, SPOT and High resolution Land Satellites (the characteristics of these satellites- orbits, sensors, and their resolutions) Multispectral remote sensing and hyper spectral remote sensing

Module II

Concept of Digital numbers

Georeferencing

Image Rectification and Restoration.

Image Enhancement.: Low and high pass filter, directional filters

Contrast Manipulation.

Spatial Feature Manipulation.

Multi-Image Manipulation.

Module III

Image Classification: Unsupervised and Supervised Classification.

Supervised Classification: The Training Stage.

The Classification Stage: Minimum-Distance to Means Classifier, Gaussian Maximum Likelihood Classifier.

Classification Accuracy Assessment and ground truth verification

Practical Course: 1 credit Maximum Marks: 25

- Interpretation of Satellite Imagery for landforms, geological structures, rock and soil types, man-made structures.
- Data Products and Meta data
- Digital Image Processing (using number matrix): enhancement, manipulation and classification.
- Digital image processing on Computer (demonstration)

SEMESTER VI

Course Title: IGNEOUS PETROLOGY Course Code: GEL-VI.C-8A Credits: 3 (45 Contact hours) Marks: 75

Learning Objectives

The course will help the students to understand petrologic processes and common rock types. In practical's, students learn to identify, describe and classify rocks using hand specimens and rock thin sections.

Course Outcomes

Upon completion of the course, the student will be able to,

CO1 Understand conceptual techniques wrt nucleation and growth of minerals thereby understanding the formation of a rock.

CO2 Identify igneous rocks in hand specimen.

CO3 Identify igneous rocks in thin sections

CO4 Classify igneous rocks

CO5 Evaluate a rock wrt its environment of formation (PT) conditions thereby assign a name.

CO6 Identify key textural and microstructures and their application related to geological processes.

CO7 Interpret ternary phase diagrams.

CO8 Classify rocks based on their chemical analysis.

Module I

Meteorites: Mineralogy and whole rock chemistry

Composition of the earth's interior = Primitive mantle Plate tectonics and igneous activity

Partial Melting and Generation of magma.

Magma Diversity:

Partial Melting: Mafic, Ultramafics

Basalts: Magma types, Basalt Tetrahedron.

Anatexis in Felsic rocks

Granites/Pegmatites: Mingling, Mixing and Crustal contamination Igneous layering - crystal settling

Gabbroic rocks, Anorthosite

Layered complexes Differentiation: Fractional Crystallization, liquid

immiscibility, flowage differentiation

Module II

(15 hours)

Ascent and emplacement of magma

Textures and microstructures of igneous rocks:

- a. Primary: Nucleation, Growth, Diffusion
- b. Secondary: Oswald ripening, twinning, zoning

Classification and Description of Igneous Rocks:

The International Union of Geological Sciences (IUGS) Classification System:

Gabbros, Granites (QAPF diagram).

Ternary System: Diopside-Albite-Anorthite (Di-Ab-An)

Module III

(15hours)

Study of the following rock types (mineralogy, petrography and petrogenesis)

Ophiolites Granitoids Carbonatites Kimberlites

Practical: 1 credit

Maximum Marks: 25

- Study of igneous rocks in hand specimen.
- Study of igneous rocks in thin sections
- CIPW Normative calculations

List of books recommended for reference

Mandatory reading

- Frost B R and Frost C D., (2014) Essentials of Igneous and Metamorphic Petrology, Cambridge University Press.
- Gill, R., (2010). Igneous rocks and process A Practical Guide, Wiley-Blackwell
- Winter, J.D., (2009) Principles of Igneous and Metamorphic Petrology, Prentice Hall

Supplementary reading

• Best, M.G., (2002). Igneous and Metamorphic Petrology, 2nd edn., Blackwell, Oxford.

- Bose, M.K., (1997). Igneous Petrology, The World Press, Kolkata.
- Raymond, A. L., (1995). Petrology-The study of Igneous Sedimentary and Metamorphic rocks. Wm. C. Brown Communications, Inc.; USA.

Course Title: **PHANEROZOICSTRATIGRAPHY OF INDIA** Course Code: **GEL-VI.E-13B** Credits: **3 (45 contact hours)** Marks: **75** Prerequisite:**GEL-V.E-9A**

Course Objectives

The course will help understanding the Indian stratigraphic units and to correlate International Geological Time Scale with Indian Stratigraphic Time Scale. Also to understand the geology, stratigraphy, fossil content, economic resources of the lithounits from the Phanerozoic Eon from the Indian context.

Course Outcomes

Upon completion of the course, the student will be able to,

CO1 Understand the Gondwana sedimentation and its economic significance.

CO2 Understand the geology and geotectonics of Triassic of Spiti.

CO3 Understand the geology and geotectonics of Jurassic of Kutch.

CO4 Understand the geology and geotectonics of Cretaceous of Trichinopoly.

CO5 Understand Deccan Flood Volcanism.

CO6 Analyse and interpret the Gondwana breakup.

CO7 Understand the geology and geotectonics of Tertiaries of Assam and its economic significance.

CO8 Understand the upheaval and evolution of Himalayas.

CO9 Relate boundary problems associated with Precambrian-Cambrian, Permian-Triassic, Cretaceous-Tertiary and Pleistocene-Holocene boundaries in India and their relation to mass extinctions.

CO10 Prepare lithostratigraphic maps.

Module I

(15 hours)

Precambrian-Cambrian boundary Cambrian Tal Muth Quartzites Gondwana sedimentation: Peninsular, Extra-Peninsular Permian-Triassic boundary

Module II

(15 hours)

(15 hours)

Jurassic of Kutch Cretaceous of Trichinopoly Deccan Flood Basalt (Age and Stratigraphy) Cretaceous-Paleocene boundary

Module III

Tertiaries of Assam Rise and evolution of Himalayas Siwaliks Pleistocene-Holocene Boundary Plant and animal life in relation to glacial and interglacial cycles during Quaternary. Recent: Laterite Formations of Goa

Practical Course: 1 credit

Maximum Marks: 25

- 1. Preparation of lithostratigraphic maps of India showing distribution of important geological formations.
- 2. Study of type hand specimens from their stratigraphic position and age.
- 3. Stratigraphic map of Goa

List of books recommended for reference

- Nanda, H., (2014) Indian Stratigraphy, Anmol Publications Pvt. Ltd. New Delhi.
- Valdiya, K. S., (2010). The Making of India, Macmillan India Pvt. Ltd.

Course Title: **ROCK STRUCTURES AND DEFORMATION MICROSTRUCTURES** Course Code: **GEL-VI. E-14B** Credits: **3 (45 Contact hours)** Marks: **75** Prerequisite: **GEL-V.E-11A**

Learning Objectives

The course will help to study deformational history of rocks. This study includes the understanding of the deformation and metamorphic processes the rock has undergone with the aim to reconstruct its structural and metamorphic history.

Course Outcomes

Upon completion of the course, the student will be able to,

CO1 Understand the process and mechanisms of rock structures and rock deformation microstructures.

CO2 Interpret the significance of microstructures in Igneous, Sedimentary and Metamorphic rocks.

CO3 Apply the significance of features like foliation and lineation in field as well as in microsections in understanding microstructures and rock deformation. **CO4** Interpret Shear Sense Indicators in Mylonites.

CO5 Enhance application skills in relating deformation history to tectonism.

CO6 Interpret deformation features in field and in microsections.

CO7 Identify and Interpret the significance of rock structures in thin sections.

CO8 Identify and Interpret the significance of rock deformation microstructures in thin sections.

Module I (15 hours)

Introduction to microstructures, Microstructures of Igneous rocks – Nucleation, growth and shape of minerals, Mineral intergrowths, zoning, twinning.Microstructures of sedimentary rocks – size, sorting and shape of mineral grains.Fossils as strain markers.

Module II (15 hours)

Microstructures of metamorphic rocks – Grain shapes and growth of porphyoblasts, twining (growth, transformation), exsolution in silicate minerals, importance of symplectites in metamorphism, compositional zoning.

Deformed rocks – brittle deformation (frictional grain boundary sliding, Fracture processes) and ductile def. (crystal plasticity, diffusion creep, ductile grain boundary sliding).

Module III (15 hours)

Foliation (Continuous and spaced) and its significance; Lineation and its significance; Mylonites, Shear sense indicators in mylonites; Strain shadows.

Practical Course: 1 credit

Maximum Marks: 25

Study of the following microstructures (any 15)
Cuspate and lobate sutured boundaries, Planar indentations
Pinning Structure
Bulging (BLG)
Subgrains, chessboard subgrains
Deformation twins, growth twins
Displaced twin lamellae
Recrystallized quartz ribbons.
Bending of cleavage planes, Mineral (mica) fish,
Porphyroclasts, asymmetric porphyroclasts depicting shear sense, Porphyroclasts with Pressure shadows, Warping of foliation around porphyroclasts / porphyoblasts, S-C fabric. Mineral overgrowth Ooids Flame perthites Myrmekites Zoning

List of books recommended for reference

Mandatory reading

- Vernon, R H., (2004) A Practical Guide to Rock Microstructures, Cambridge University Press.
- Blenkinsop, T. (2002) Deformation microstructures and mechanisms in minerals and rocks, Kluwer Academic Publishers.

Supplementary Reading

• Mukherjee, S., (2013) Deformation Microstructures in rocks. Springer-Verlag Berlin Heidelberg

Course Title: **SURVEYING, MAPPING AND FIELD GEOLOGY** Course Code: **GELVI.E-15A** Marks: **75** Credits: **3 (45 Contact hours)** Mandatory requirement: **Individual Laptop with MS Windows OS**

Course Objectives

To Provide basic knowledge of surveying techniques To upgrade and relate the theoretical knowledge of Geological aspects to

field

observations.

This course also introduces the basic principles and techniques of Geographic

information Systems (GIS)

Course Outcomes

Upon completion of the course, the student will be able to,

CO1 Carry out dumpy level survey.

CO2 Carry out plane table survey.

CO3 Understand SOI Toposheet catalogue.

CO4 Learn to plan for a geology field trip.

CO5 Record detailed field observations systematically in their field diary and subsequently prepare a geologic field report of the same.

Module I

Surveying, Objectives of Survey;

Primary divisions of Surveying – Geodetic and Plane Surveys uses and Principles of Surveying.

Methods of locating a point

Plane Table Survey: Instruments, Procedures of Plane table surveys; Methods (Demonstrative): Radiation and Intersections, advantages and disadvantages of Plane Tabling.

Levelling, characteristics of land surveying instruments, Bench Marks, Change Points. Levelling operations and steps in Levelling: Demonstration with exercises in the field. Principles of Levelling: Simple and Differential,

Reduction of Levels: The Collimation, and Rise and Fall systems of Computation. Theodolite survey: Principles and working,

Module II

(15 hours)

SOI Toposheet Indexing scheme, Map symbol reading SOItoposheet map reading Standard Symbols/colour for lithology and symbols related to structures Munsell colour chart Understanding map reliability GPS surveys

Geological mapping

Basic field gear

Planning a field Project: Preparations for the field, Taking geologic notes in the field: Basic procedures at outcrops – noting characters of igneous, sedimentary and metamorphic rocks, Measuring strike and dip (attitude) of planar and linear features using a clinometer compass, a Brunton Compass.

Module III

(15 hours)

Introduction to GIS Components of GIS Georeferencing Digitizing: Point, line, polygon Attribute data Map layout and cartographic output

Practical course: 1 credit Maximum Marks: 25

• The evaluation is to be based on preparation of portfolio that should include plans drawn using Plane table, a Levelling Exercise.

(15 hours)

- Assessment to be based on presentation of Field diary, Field report, and field based viva voce on the localities visited for field work.
- Hands-on exercises in QGIS and Google Earth.

Course Title: **PRINCIPLES OF GEOPHYSICAL EXPLORATION AND MINING** Course Code: **GEL-VI.E-16A** Credits: **3 (45 Contact hours)** Marks: **75**

Course Objectives

Mining being a key source of revenue generation for the Central as well as State governments, and an important job provider for Geologists, this course is designed to equip the undergraduate student with basic knowledge of key concepts of mining processes right from exploration to exploitation, together with an acquaintance of government regulations that control the mining and mineral conservation processes. In Geophysical exploration the student will gain first-hand knowledge dealing with the principles and their significance.

Course Outcomes

Upon completion of the course, the student will be able to,

CO1 Gain knowledge of key concepts of mining processes right from exploration to exploitation

CO2 Understand the difference between the nature of, and factors leading to the choice between, Open-cast and Underground mining methods.

CO3 Explain the different techniques of ore beneficiation.

CO4 Get acquainted with government agencies and regulations that control the mining and mineral conservation processes.

CO5 Explain the principles behind, and methods of Geophysical, Geochemical and Geobotanical exploration.

- **CO6** Draw cross and longitudinal sections using bore-hole Data.
- **C07** Estimate ore reserves using different methods.
- **CO8** Get a first-hand experience in core-logging

Module I

(15 hours)

Mining Terminology Classification of mining methods.

Factors influencing choice of mining method

- Open cast mining
- Underground mining
 - Coal mining methods

• Alluvial mining

Ore Dressing or Beneficiation:

- Principles and methods
- Terminology of quantification of results

Environmental Impact of Mining Brief outline of:

National Mineral Policy Regulations and Acts Regulating Agencies

Module II

Mineral Exploration: Sequence and phases

- \circ $\,$ Float ores and In situ ores
 - Pits, Trenches and Boreholes
 - Spacing
 - Drilling:
 - Core and non-core drilling
 - Equipment and accessories
 - Core drill sampling
 - \circ core splitting
 - \circ logging
 - o Storage
 - o Sludge
 - Combining Assay returns from sludge and core

Categories of reserves

Estimation of reserves

- $\circ \quad \text{Cross-sectional method} \quad$
- $\circ \quad \text{Area of influence method} \\$
- Triangular method
- Weighted volume estimate method
- Estimation of stockpiles by prismoidal formula

Module III

(15 hours)

Methods of Exploration: Geobotanical, Geochemical and Geophysical. Geophysical Methods:

Self-potential method:, mechanism, equipment, interpretation of anomalies. *Gravity surveying*: Gravity surveying, Interpretation

Magnetic surveying: concepts, Rock magnetism, Geomagnetic field, Magnetic anomalies, Instruments used, Corrections, Interpretation, Application.

Practical Course: 1 credit

Maximum Marks: 25

- Drawing cross and longitudinal sections using bore-hole data
- Problems based on estimation of ore reserves

(15 hours)

- Interpretation of bouguer gravity anomaly maps, and magnetic data.
- Core logging
