

## Steps to “Edit a video on PC”

Search for “OpenShot Download” and click on the first link

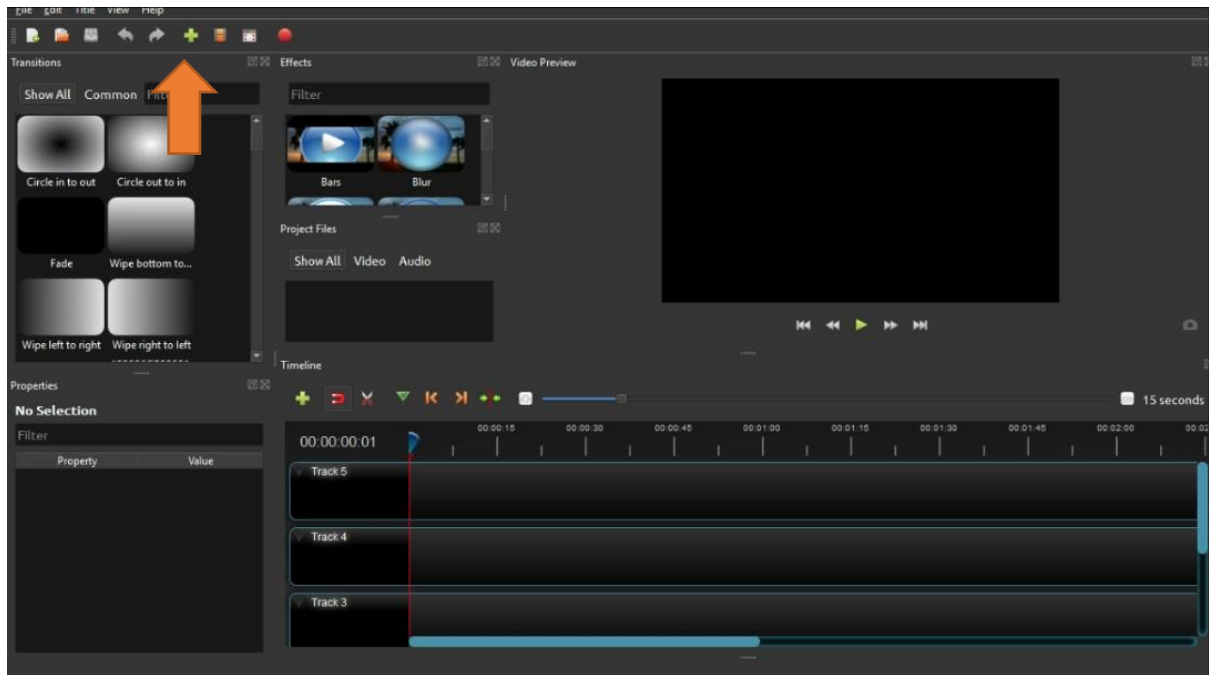

To Install, tick mark on I accept the agreement and click on install

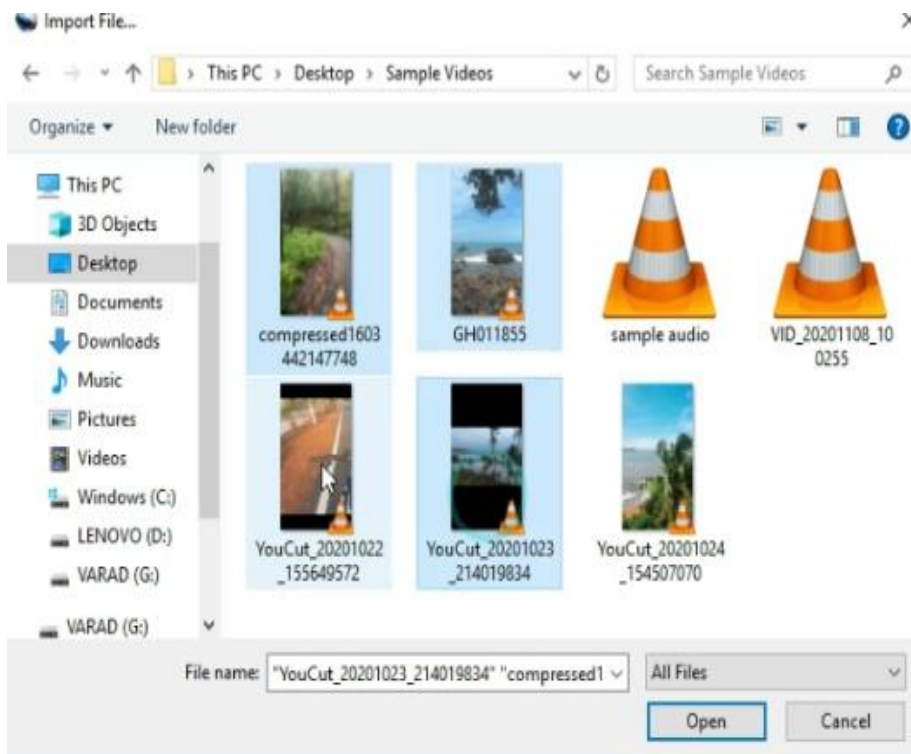

Click on Finish

Open the software and click on the “+” to IMPORT Videos

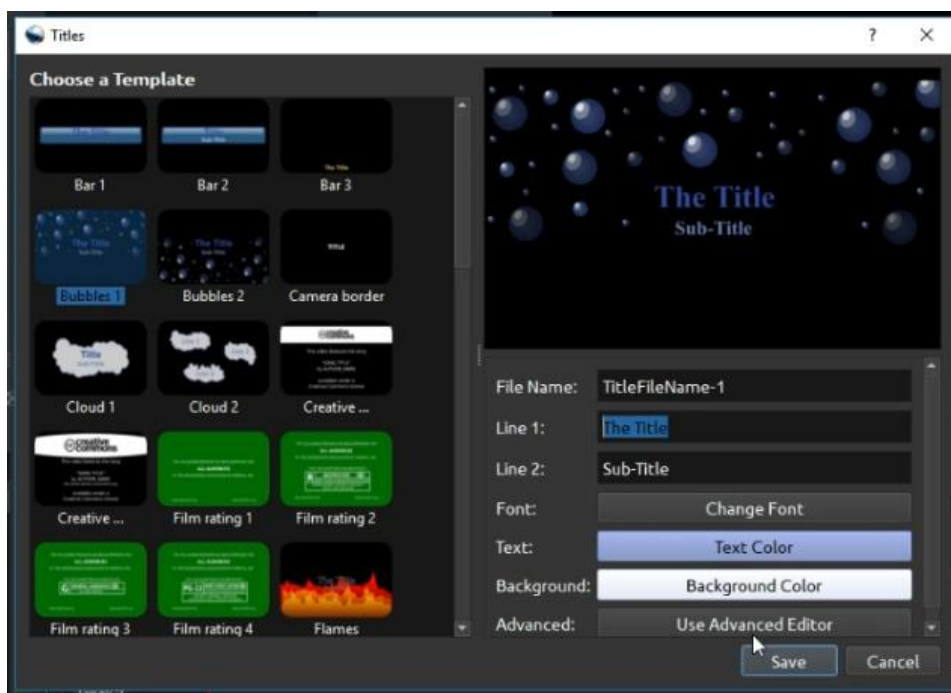

Select the video files, and click on OPEN

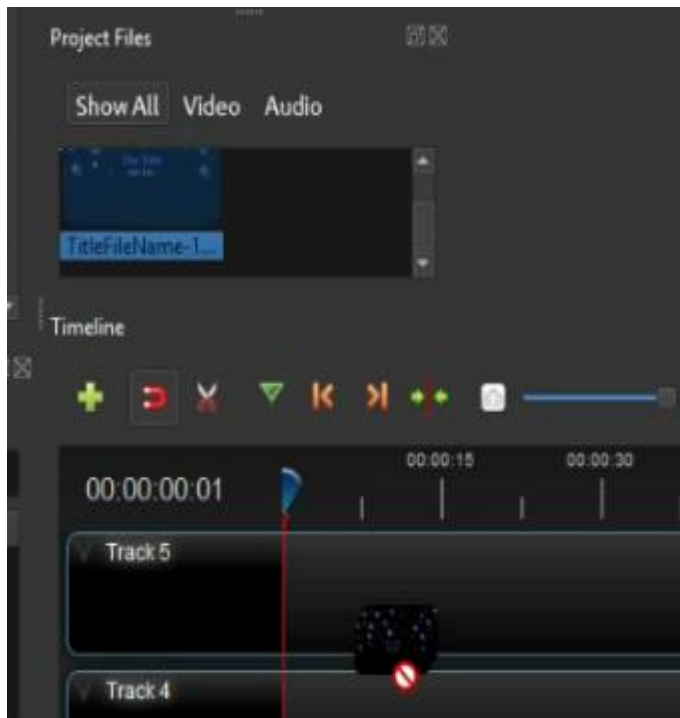

To add a title to the video, click on the title in the option menu and select the template

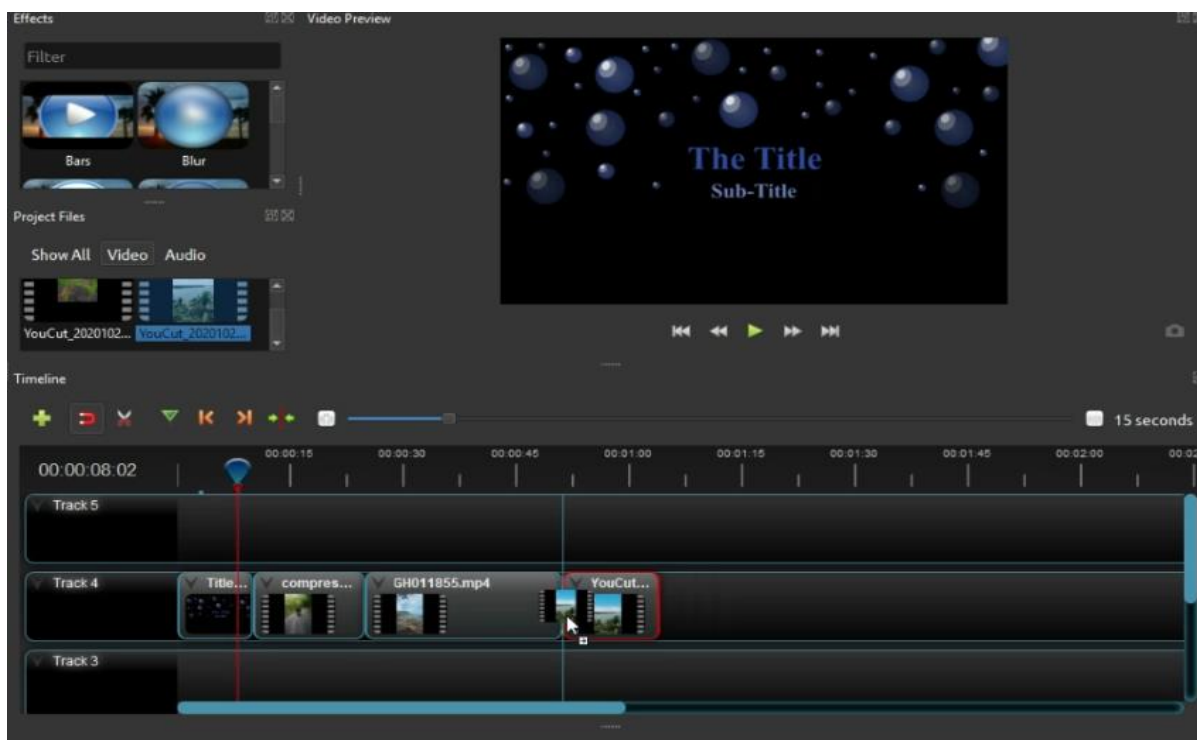

Choose required template and click on SAVE

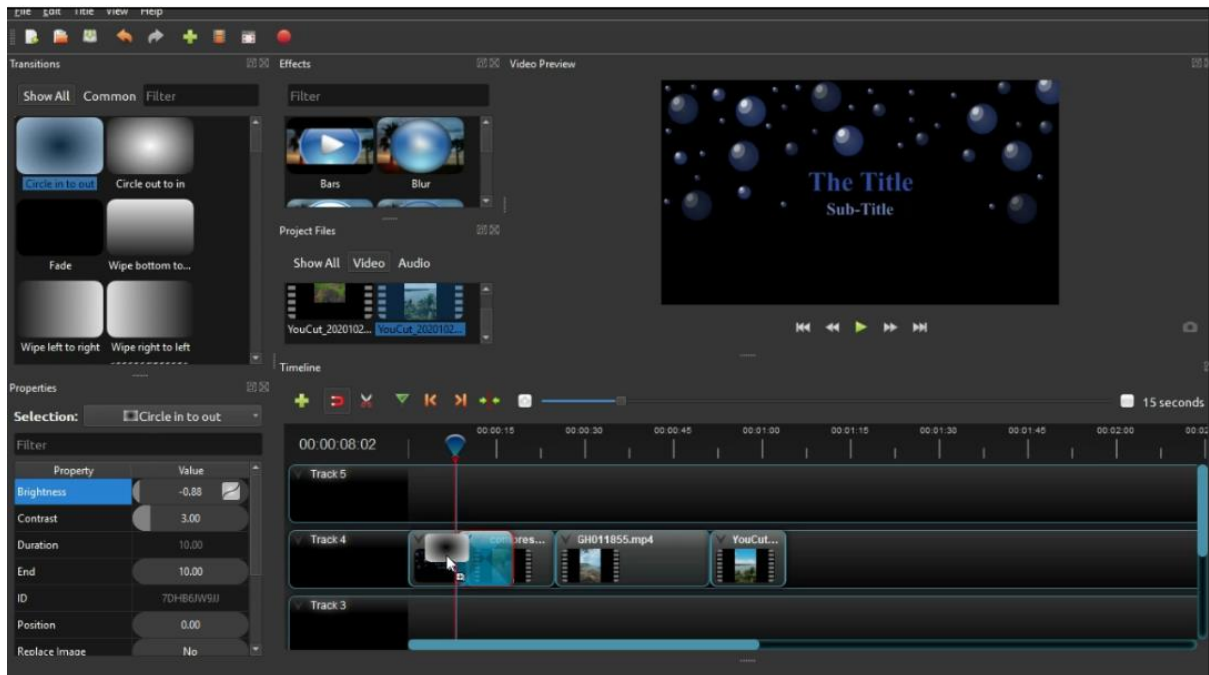

**Drag and drop the title file in the 1<sup>st</sup> Channel, and preview**

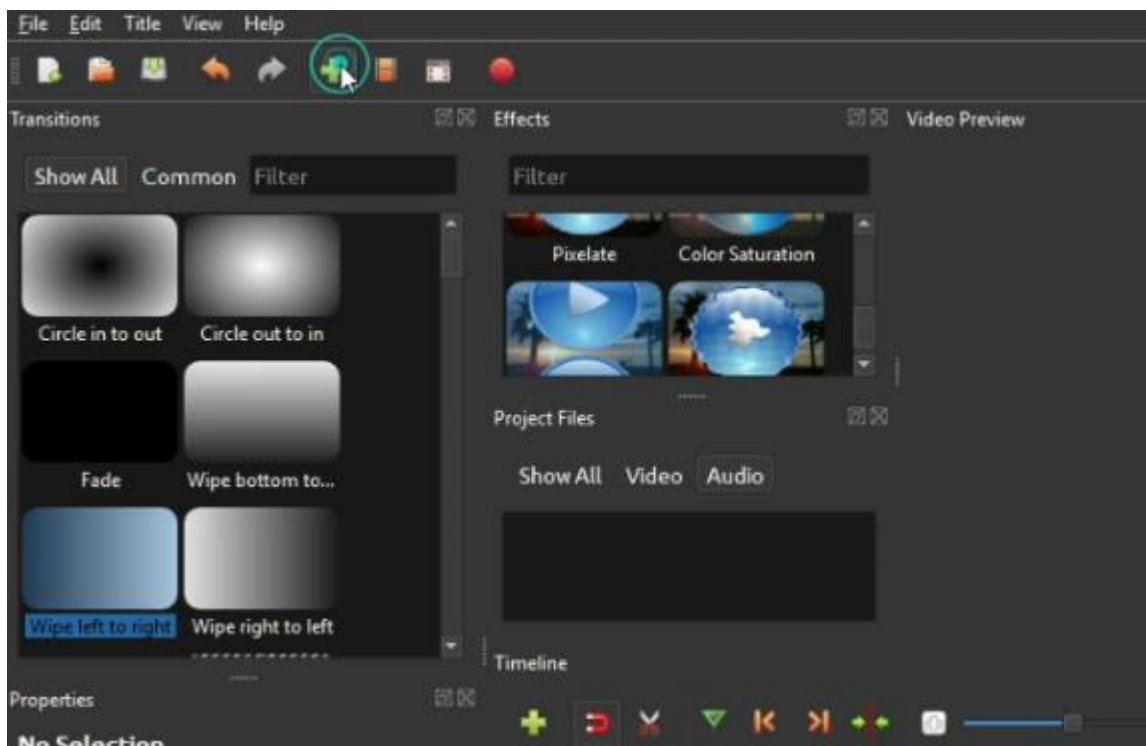

**Drag and Drop the video files which were imported and preview the same**

**Drag and drop the transitions in between the videos for better effects**

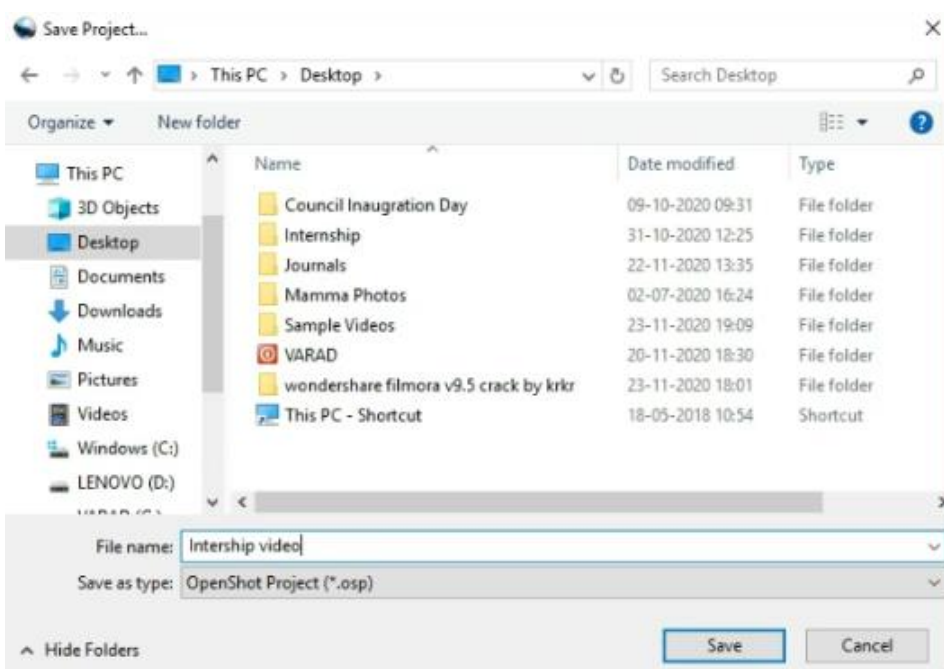

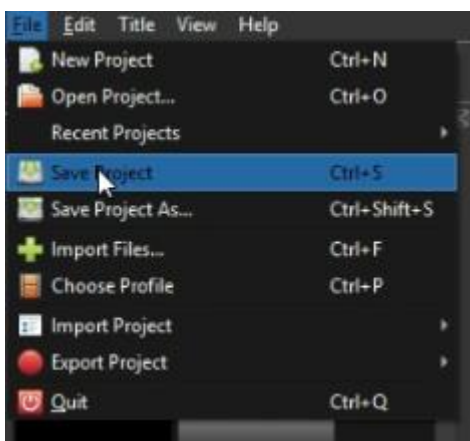

**Import Audio files to put voice over, by clicking on the “+” symbol**

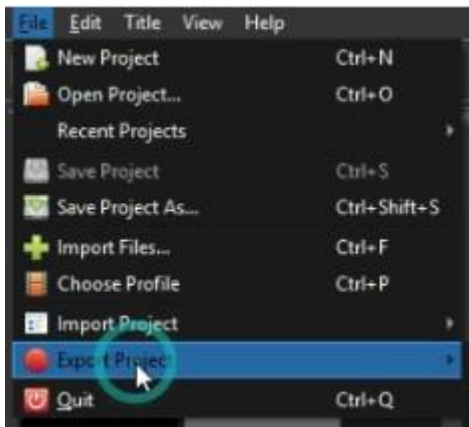

To save the project for further use, Go to Files->Save Project and give an appropriate name

To export the video, Go to Files-> Export Video

Select required profile and click on EXPORT VIDEO
